

COVID-19 Living Evidence Profile #1

(Version 5: 16 March 2021)

Appendix 1: Methodological details

We use a standard protocol for preparing living evidence profiles (LEP) to ensure that our approach to identifying research evidence as well as experiences from other countries and from Canadian provinces and territories are as systematic and transparent as possible in the time we were given to prepare the profile.

Identifying research evidence

For each LEP, we search our continually updated [inventory of best evidence syntheses](#) and [guide to key COVID-19 evidence sources](#) for:

- 1) guidelines developed using a robust process (e.g., GRADE);
- 2) full systematic reviews;
- 3) rapid reviews;
- 4) guidelines developed using some type of evidence synthesis and/or expert opinion;
- 5) protocols for reviews or rapid reviews that are underway;
- 6) titles/questions for reviews that are being planned; and
- 7) single studies (when no guidelines, systematic reviews or rapid reviews are identified).

For the first version of this LEP, we also searched Health Systems Evidence (www.healthsystemsevidence.org) and HealthEvidence (www.healthevidence.org), to identify any relevant evidence documents that might have relevance to the COVID-19 vaccine roll-out, but were produced before the pandemic, given that the other sources searched were specific to COVID-19. In Health Systems Evidence, we searched for overviews of systematic reviews, systematic reviews of effects, systematic reviews addressing other questions, and protocols for systematic reviews, that may provide insights about vaccine-delivery systems by searching for ‘vaccine’ using the filters for ‘public health’ (under health-system sectors). In HealthEvidence, we searched using the categories for ‘Immunization’ and ‘Policy and Legislation’ under the intervention strategy filter combined with ‘Communicable Disease/Infection’ category under the topic filter.

Each source for these documents is assigned to one team member who conducts hand searches (when a source contains a smaller number of documents) or keyword searches to identify potentially relevant documents. A final inclusion assessment is performed both by the person who did the initial screening and the lead author of the rapid evidence profile, with disagreements resolved by consensus or with the input of a third reviewer on the team. The team uses a dedicated virtual channel to discuss and iteratively refine inclusion/exclusion criteria throughout the process, which provides a running list of considerations that all members can consult during the first stages of assessment.

During this process we include published, pre-print and grey literature. We do not exclude documents based on the language of a document. However, we are not able to extract key findings from documents that are written in languages other than Chinese, English, French or Spanish. We provide any documents that do not have content available in these languages in an appendix containing documents excluded at the final stages of reviewing.

Identifying experiences from other countries and from Canadian provinces and territories

For each LEP, we collectively decide on what countries to examine based on the question posed. For other countries we search relevant sources included in our continually updated guide to key COVID-19 evidence sources. These sources include government-response trackers that document national responses to the pandemic. In addition, we conduct searches of relevant government and ministry websites. In Canada, we search websites from relevant federal and provincial governments, ministries and agencies (e.g., Public Health Agency of Canada).

While we do not exclude countries based on language, where information is not available through the government-response trackers, we are unable to extract information about countries that do not use English, Chinese, French or Spanish as an official language.

Assessing relevance and quality of evidence

We assess the relevance of each included evidence document as being of high, moderate or low relevance to the question. We then use a colour gradient to reflect high (darkest blue) to low (lightest blue) relevance.

Two reviewers independently appraise the methodological quality of systematic reviews and rapid reviews that are deemed to be highly relevant. Disagreements are resolved by consensus with a third reviewer if needed. AMSTAR rates overall methodological quality on a scale of 0 to 11, where 11/11 represents a review of the highest quality. High-quality reviews are those with scores of eight or higher out of a possible 11, medium-quality reviews are those with scores between four and seven, and low-quality reviews are those with scores less than four. It is important to note that the AMSTAR tool was developed to assess reviews focused on clinical interventions, so not all criteria apply to systematic reviews pertaining to health-system arrangements or to economic and social responses to COVID-19. Where the denominator is not 11, an aspect of the tool was considered not relevant by the raters. In comparing ratings, it is therefore important to keep both parts of the score (i.e., the numerator and denominator) in mind. For example, a review that scores 8/8 is generally of comparable quality to a review scoring 11/11; both ratings are considered 'high scores.' A high score signals that readers of the review can have a high level of confidence in its findings. A low score, on the other hand, does not mean that the review should be discarded, merely that less confidence can be placed in its findings and that the review needs to be examined closely to identify its limitations. (Lewin S, Oxman AD, Lavis JN, Fretheim A. SUPPORT Tools for evidence-informed health Policymaking (STP): 8. Deciding how much confidence to place in a systematic review. *Health Research Policy and Systems* 2009; 7 (Suppl1):S8.

Preparing the profile

Each included document is hyperlinked to its original source to facilitate easy retrieval. For all included guidelines, systematic reviews, rapid reviews and single studies (when included), we prepare a small number of bullet points that provide a brief summary of the key findings, which are used to summarize key messages in the text. Protocols and titles/questions have their titles hyperlinked given that findings are not yet available. We then draft a brief summary that highlights the total number of different types

of highly relevant documents identified (organized by document), as well as their key findings, date of last search (or date last updated or published), and methodological quality.

Appendix 2a: Key findings from new evidence documents that address the question, organized by document type and sorted by relevance to the question and COVID-19

Type of document	Relevance to question	Key findings	Recency or status
Guidelines developed using a robust process (e.g., GRADE)	<ul style="list-style-type: none"> • Administering vaccines in ways that optimize timely uptake <ul style="list-style-type: none"> ○ With what explicit effort to leverage existing health-system arrangements • Surveillance, monitoring and evaluation, and reporting <ul style="list-style-type: none"> ○ Documenting vaccine status ○ Documenting adverse events and follow-up ○ Monitoring supply safety ○ Identifying and measuring performance indicators (particularly those adjusted from standard vaccine programs) ○ Infrastructure to enable surveillance, monitoring and evaluation 	<ul style="list-style-type: none"> • This document on monitoring COVID-19 vaccination provides guidance about: <ul style="list-style-type: none"> ○ Minimum and optional data to collect as vaccines are being rolled out and delivered ○ Key performance indicators and the anticipated use of these to measure the performance of key components of the immunization system and to take corrective action when needed ○ The use of information systems to collect, store, analyze and disseminate any relevant information • This interim guidance is primarily directed at national authorities who are responsible for the management, implementation and monitoring of COVID-19 vaccine introduction and delivery in their countries, and may also be useful for any partners who provide the required support in countries or organizations that develop and deploy information systems to support vaccination programs • This interim guidance presents different tools for recording and reporting COVID-19 vaccination data, including home-based records (vaccination cards), facility-based records (immunization registers), tally sheets, periodic reports, and dashboards • This interim guidance presents different types of digital systems to collect, report and analyze COVID-19 vaccination data, including health-management information systems (HMIS), electronic immunization registries (EIR), digital vaccination cards and certificates, logistics- 	Published 3 March 2021

	<ul style="list-style-type: none"> ▪ Data and evidence about safety and about effectiveness in terms of both protection against COVID-19 and protection against transmission 	<ul style="list-style-type: none"> ○ Negatively associated with the perception that the media has over-exaggerated the risks of catching the virus ● Perceived facilitators to the COVID-19 vaccination uptake included perceptions of risk to personal health, severity of COVID-19, and health consequences to others from COVID-19 ● Concerns about vaccine safety acted as a barrier to COVID-19-vaccination uptake ● Content of mass-media interventions to improve vaccine uptake should focus on the behaviour-change techniques (BCTs) of information about health, emotional, social and environmental consequences, and salience of consequences <p>Source</p>	

Appendix 3: COVID-19 vaccine roll-out elements from other countries

Country	Securing and distributing a reliable supply of vaccines and ancillary supplies	Allocating vaccines and ancillary supplies equitably	Communicating vaccine-allocation plans and the safety and effectiveness of vaccines	Administering vaccines in ways that optimize timely uptake	Surveillance, monitoring and evaluation, and reporting
Australia	<ul style="list-style-type: none"> • On 7 January 2021, the Australian Government released its COVID-19 Vaccine National Rollout Strategy, which outlines the targeted number of doses to be administered during each phase: <ul style="list-style-type: none"> ○ Phase 1A: 1.4 million ○ Phase 1B: 14.8 million ○ Phase 2A: 15.8 million ○ Phase 2B: 16 million ○ Phase 3: 13.6 million • Australia has partnered with the University of Oxford-AstraZeneca, Novavax, Pfizer-BioNTech, and COVAX Facility to secure a range of COVID-19 vaccine supply <ul style="list-style-type: none"> ○ Australia has secured an estimated 53.8 million doses of the University of Oxford-AstraZeneca vaccine – 3.8 million doses will be imported, while the remaining 50 million will be manufactured domestically by CSL Behring ○ The government has secured 51 million doses of the Novavax vaccine, 	<ul style="list-style-type: none"> • The COVID-19 Vaccine National Rollout Strategy highlights the priority populations for each of the five phases: <ul style="list-style-type: none"> ○ Phase 1A: quarantine and border workers, front-line healthcare workers, and aged-care and disability staff/residents ○ Phase 1B: older adults aged 70 years and over, other health care workers, adults with pre-existing conditions, high-risk workers (e.g., fire, police, and meat processing staff), and Aboriginal and Torres Strait Islander people ○ Phase 2A: Adults between 50-69 years of age, Aboriginal and Torres Strait Islander people, and other high-risk workers ○ Phase 2B: the remaining adult population and unvaccinated individuals from any of the previous phases ○ Phase 3: residents younger than 18 years of age and those younger than 16 years of age for the Pfizer vaccine only 	<ul style="list-style-type: none"> • To inform residents, the Government of Australia will be promoting an educational campaign on its COVID-19 vaccination program <ul style="list-style-type: none"> ○ This campaign will include medical experts discussing vaccine roll-out, priority populations, and projected timelines ○ This will be aimed towards priority groups, culturally diverse groups, and Aboriginal and Torres Strait Islander people ○ On 1 March 2021, the second phase of this campaign was launched • The Australian Government's Department of Health released a series of campaign materials to inform citizens on the COVID-19 vaccine, using television ads, videos, posters, 	<ul style="list-style-type: none"> • In addition to residential disability and aged-care facilities, a total of 30-50 hospital sites will serve as centres (i.e., Pfizer Hubs) for vaccine administration, including: <ul style="list-style-type: none"> ○ Three in New South Wales; ○ Four in Victoria; ○ Three in Queensland; ○ Two in South Australia; and ○ One in each of Western Australia, Tasmania, Australian Capital Territory, and Northern Territory • Pfizer-BioNTech vaccines will only be administered at Hospital/Pfizer Hubs <ul style="list-style-type: none"> ○ General practices will provide vaccines to individuals aged 70 and over, individuals with pre-existing conditions, and in Phase 1B, Aboriginal and Torres Strait Islander people 	<ul style="list-style-type: none"> • All successfully administered COVID-19 vaccinations will be documented into reporting and monitoring systems (e.g., Australian Immunisation Register) <ul style="list-style-type: none"> ○ This will include personal information such as name, date of birth, contact details, gender, and if applicable, healthcare number and Medicare identifier ○ Information from the Australian Immunisation Register is routinely uploaded to the Enterprise Data Warehouse (EDW) ○ De-identified data from the EDW will be transferred to the Vaccine Data Solution, a software that helps to monitor the coverage and logistics of the COVID-19 vaccine roll-out • The Australian Government has partnered with Accenture

	<p>which will be manufactured and imported internationally from Europe</p> <ul style="list-style-type: none"> ○ Australia has secured 10 million Pfizer-BioNTech vaccine doses, which will be manufactured and imported from the United States, Belgium, and Germany ○ On 4 February 2021, the Department of Health announced that Australia will receive an additional 10 million doses of the Pfizer-BioNTech vaccine in the second half of 2021, resulting in a total of 20 million secured doses ● On 24 December 2020, the government announced that DHL Supply Chain and Linfox will lead the COVID-19 vaccine distribution in Australia, which will be required to track the temperature of the vaccines and manage ancillary supplies (e.g., needles, syringes, and personal protective equipment) ● On 25 January 2021, the Therapeutic Goods Administration (TGA) provisionally approved the use of the Pfizer- 	<ul style="list-style-type: none"> ● Vaccine rollout commenced as scheduled on 22 February 2021 <ul style="list-style-type: none"> ○ Phase 1B of the vaccine roll-out is scheduled to commence on 22 March 2021 ● The administration of the Oxford-AstraZeneca vaccine commenced on 5 March 2021 in South Australia ● As of 7 March 2021, a total of 86,369 COVID-19 vaccines have been administered to Australians 	<p>presentations, and social-media graphics</p> <ul style="list-style-type: none"> ○ Educational material (e.g., videos) with translated subtitles are now available in multiple languages, such as Arabic, Korean, Italian, Hindi, Spanish, and Russian ○ This includes health professionals and researchers responding to public enquiries through a series of “Top 3 COVID-19 Vaccine Questions” ● The Government of Australia invested a total of \$23.9 million into the development of this vaccine information campaign ● On 8 March 2021, a COVID-19 vaccine eligibility tracker was launched to help provide Australians with a projected vaccination timeline 	<ul style="list-style-type: none"> ○ The Oxford-AstraZeneca vaccine will be administered at general practitioner-led respiratory clinics, select general practices, state-run vaccination clinics, and Aboriginal Controlled Community Health Centres ● Over 4,500 accredited general practices will serve as administration sites in Phase 1B of the vaccine roll-out <ul style="list-style-type: none"> ○ This will initially commence with an estimated 1,000 general practices during the week of 22 March 2021 and gradually increase to up to 4,500 in the subsequent weeks ● Vaccines will be administered to long-term care home residents in an estimated 240 aged care facilities in over 190 regions across all states and territories in Australia ● On 2 February 2021, an investment of \$1.9 billion was announced to boost the national 	<p>to develop a monitoring program for COVID-19 vaccines</p> <ul style="list-style-type: none"> ● The Government of Australia released a series of informative resources to aid residential aged-care providers with the vaccine roll-out (e.g., monitoring and reporting) ● A public form is available for health professionals and the general public to make enquiries related to COVID-19 vaccines
--	---	--	---	---	--

	<p>BioNTech COVID-19 vaccine in Australia</p> <ul style="list-style-type: none"> ○ On 15 February 2021, Australia received its first shipment of over 142,000 doses of the Pfizer-BioNTech vaccine ● Delivery of the Pfizer-BioNTech vaccine will consist of: <ul style="list-style-type: none"> ○ verifying dispatched batches at the border ○ distributing imported doses to vaccination sites ● In order to safely store and handle the Pfizer-BioNTech vaccine, the Government of Australia is preparing to secure cold-chain storage, staff training, and regular management of equipment and monitoring systems ● On 16 February 2021, the TGA provisionally approved the use of the Oxford-AstraZeneca COVID-19 vaccines for citizens aged 18 years and older ● On 28 February 2021, 300,000 doses of the Oxford-AstraZeneca vaccine arrived in Australia 			<p>COVID-19 vaccine roll-out plan</p> <ul style="list-style-type: none"> ● The Government of Australia has called upon the following four providers to help support the vaccine workforce with increased staff and training initiatives: <ul style="list-style-type: none"> ○ Aspen Medical ○ Healthcare Australia ○ International SOS ○ Sonic Clinical Services ● In partnership with the Australian College of Nursing, the federal government of Australia is creating fully funded, accredited training modules for vaccination providers, and non-clinical and administrative staff; training will be available to: <ul style="list-style-type: none"> ○ Health professionals in hospitals ○ General practices ○ State and Commonwealth clinics ○ Aboriginal Community Controlled Health Organizations ○ Pharmacies ● The subset of “Core” modules will cover: 	
--	--	--	--	---	--

				<ul style="list-style-type: none"> ○ Handling and storage ○ Communication and purpose ○ Multi-dose vial training ○ Documentation and reporting ○ Safety and surveillance ● The second/ “additional” subset of training modules will cover detailed topics pertaining to the Pfizer-BioNTech, Novavax, and Oxford-AstraZeneca vaccines ● The Australian Defense Force will provide additional personnel to assist with the vaccine roll-out in residential aged-care facilities 	
China	<ul style="list-style-type: none"> ● China has established and implemented whole-process traceability systems for COVID-19 vaccines, including in-out inventory registration, production, transportation, storage and administration, and to ensure the supply of vaccines through various methods such as precise deployment, accelerated turnover, and matching demand according to the vaccine plan of each province 	<ul style="list-style-type: none"> ● China implemented a two-step strategy for COVID-19 vaccination <ul style="list-style-type: none"> ○ The first step is the vaccination of priority populations, including the workers in the cold-chain industry, port inspection and quarantine, ship piloting, aviation, public transport, fresh markets, healthcare settings, and those who plan to work or study in countries and regions with medium or high risk of COVID-19 infection 	<ul style="list-style-type: none"> ● On 7 January 2021, China CDC issued the 30 questions and answers about COVID-19 vaccines, covering the vaccine-allocation plans, vaccination mechanism, effectiveness and safety, current vaccine options, vaccination locations, vaccine-administration protocols, contraindications, adverse events following immunization, transportation and 	<ul style="list-style-type: none"> ● The administration of COVID-19 vaccines is carried out in vaccination sites that are approved by local health-administration departments <ul style="list-style-type: none"> ○ Generally, the vaccination sites are set up in the health service centres, township health centres or general hospitals in the jurisdictions ○ For the enterprises and organizations 	<ul style="list-style-type: none"> ● The Vaccine Administration Law of the People's Republic of China indicates that the state shall implement whole process electronic traceability systems for vaccines ● After vaccine marketing, the vaccine production, transportation, storage and administration shall be recorded and the whole process traceability information, including vaccine types, manufacturers, dosage

	<ul style="list-style-type: none"> • The pricing of COVID-19 vaccines is developed by the vaccine industry based on the attributes of public products and the related costs <ul style="list-style-type: none"> ○ The government of China will provide COVID-19 vaccines to the public for free • As COVID-19 vaccines are put into use in China, the government will make the vaccine a global public product and supply the vaccines to the world at a fair and reasonable price • Until 5 January 2021, the Ministry of Industry and Information Technology (MIIT) has moved to facilitate corporate cooperation along industrial chains to accelerate the industrialization of COVID-19 vaccines and expand production capacity to ensure the supply of vaccines • The Hong Kong Special Administrative Region (HKSAR) government has secured a total of 22.5 million doses of COVID-19 vaccines, enough to cover Hong Kong's 7.5-million population, as each person needs to take two jabs 	<ul style="list-style-type: none"> ○ With COVID-19 vaccines officially approved to enter the market or the yield of vaccines improving steadily, the second step is to put more vaccines into use, inoculating the eligible population as widely as possible, with priority for the elderly and high-risk populations with underlying diseases • Given the availability and affordability of COVID-19 vaccines in developing countries, the government of China will consider providing vaccines in a variety of ways, including donations and unpaid assistance, based on specific circumstances • According to the National Health Commission (NHC), China aims to vaccinate the eligible population as widely as possible and gradually build an immune barrier within the whole population to control the epidemic <ul style="list-style-type: none"> ○ The vaccination is being administered first to key groups, then to high-risk groups and then to the general population, as the vaccine's production capacity increases • In Hong Kong, the priority groups include medical workers and the aged, nursing home staff, public-service 	<p>storage, monitoring and documentary, behaviours after vaccination, and risk-mitigation efforts</p> <ul style="list-style-type: none"> • On 3 February 2021, The Ministry of Public Security of China has deployed a national campaign to combat vaccine-related crimes, including manufacture and sale of fake vaccines, illegal operations, and smuggling of vaccines, illegal medical practice and related fraud activities • China's State Council Joint Prevention and Control Mechanism against COVID-19 holds regular press conferences that include information about COVID-19 vaccines • Multiple approaches for communicating about the COVID-19 vaccines, such as popular social media (e.g., WeChat), 24-hour hotline service and community campaigns, are being used • State Councillor and Foreign Minister Wang Yi said on 7 March 2021 that China opposes 	<p>where the priority populations are concentrated, the temporary vaccination sites will be set up</p> <ul style="list-style-type: none"> ○ Information on vaccination sites will be made available to the public ○ As of 9 January 2021, China has set up a total of 25,392 vaccination sites • During the vaccination process, the recipients should pay attention to and cooperate with the following aspects: <ul style="list-style-type: none"> ○ Recipients need to bring identification documents, and wear personal protection equipment according to local prevention and control requirements, and truthfully provide information such as health status and vaccination contraindications ○ After vaccination, recipients should stay for 30 minutes; if there is a suspected adverse reaction, immediately report to the vaccination 	<p>forms, formulation, batch numbers, expiration dates, and vaccination case records, shall be integrated into the electronic information system</p> <ul style="list-style-type: none"> • The related vaccine laws have clear regulations on the monitoring, reporting and handling of adverse events following immunization • As of 31 January 2021, the surveillance analysis showed that the incidence of severe abnormal reactions caused by the COVID-19 vaccines currently used in China was no higher than that of the influenza vaccines, and the surveillance of adverse events related to COVID-19 vaccination in different places will be ongoing and dynamic • On 6 February 2021, a mobile application "Health Kit" was developed for checking the vaccination status, including four types of status: "no inoculation history", "having applied for and yet to receive vaccination", "first dose administered" and "immunization series
--	--	---	---	---	--

	<ul style="list-style-type: none"> • As of 3 March 2021, China has put the Sinopharm inactivated COVID-19 vaccines into mass production and the output is expected to surpass 1 billion doses in 2021 • As of 3 March 2021, China has granted conditional market approval to four self-developed COVID-19 vaccines and 17 Chinese vaccines have entered clinical trials • On 25 January 2021, the Ministry of Transport of China, the National Health Commission, the General Administration of Customs and the National Medical Products Administration issued the technical guideline about road transportation of COVID-19 vaccines and related products <ul style="list-style-type: none"> ○ The vehicles transporting COVID-19 vaccines will be exempted from tolls before 31 December 2021 • As of 7 March 2021, China has donated or is donating COVID-19 vaccines to 69 developing countries in urgent need, and is exporting vaccines to 43 countries, to address 	<p>providers such as street cleaners, postmen and discipline force members, and workers in cross-border transport, including truck drivers and crews</p> <ul style="list-style-type: none"> • As of 28 February 2021, over 52 million doses of COVID-19 vaccines have been administered in China • As of 7 March 2021, about 93,000 Hong Kong residents received the first dose of COVID-19 vaccines • On 8 March 2021, the priority groups in Hong Kong will be expanded, covering workers in the catering industry, tourism, public transportation, property management, construction sites, and schools • In Macao, the priority was given to certain groups of people, including those engaged in front-line work for epidemic control and those who are at high risk in terms of occupational exposure <ul style="list-style-type: none"> ○ On 22 February 2021, the Macao Special Administrative Region (SAR) started inoculating local residents who are not in prioritized groups with mainland-made COVID-19 vaccines ○ As of 22 February 2021, about 15,000 residents in Macao had made reservations for inoculation 	<p>"vaccine nationalism" and rejects any "vaccine divide" or any attempt to politicize vaccine cooperation</p>	<p>institution and seek medical advice</p> <ul style="list-style-type: none"> • After vaccination, wearing masks is recommended; other protective measures such as hand hygiene, ventilation, and social distancing need to be maintained • Different areas explored different administration methods, for example, setting up temporary vaccination locations and establishing online vaccination appointments for priority populations • On 24 January 2021, China CDC issued the technical recommendations on environmental specimen monitoring in vaccination sites, including the disinfection recommendations • China will launch health certificates for international travellers that will declare a person's vaccination status or recent test results 	<p>completed”, and this application could be in Chinese or English language</p>
--	--	---	--	---	---

	<p>disparities in COVID-19 vaccine distribution</p> <ul style="list-style-type: none"> ○ As of 7 March 2021, over 60 countries have authorized the use of Chinese vaccines 	<p>and over 3,000 in prioritized groups had completed the inoculation</p> <ul style="list-style-type: none"> ● China will launch a "spring sprout" program to assist and secure vaccination for its citizens with Chinese or foreign vaccines <ul style="list-style-type: none"> ○ This program will include setting up vaccination stations in countries where conditions allow Chinese vaccines to be administered to nationals living in surrounding countries 			
France	<ul style="list-style-type: none"> ● France has been allocated a total of 200 million vaccine doses through partnerships secured by the European Commission ● Distribution of Pfizer-BioNTech vaccines to administration sites follows one of the following processes: <ul style="list-style-type: none"> ○ Delivery from the production plant to one of 11 private platforms capable of storing the vaccine at -80°C. Vaccines are then transported to pharmacies and institutional care facilities (e.g., long-term care) for use, or ○ Direct delivery to one of 100 hospitals in the 	<ul style="list-style-type: none"> ● Based on the recommendations set forth by the French National Authority for Health, the Ministry for Solidarity and Health announced its vaccine strategy, which outlines a three-phase approach for vaccine allocation: <ul style="list-style-type: none"> ○ Priority groups in phase one include older adults, residents with disabilities, at-risk staff members in institutional care and healthcare workers ○ Phase two includes individuals aged 65 to 74 years ○ Phase three consists of other at-risk groups from within the population that have yet to be targeted (e.g., teachers and retail staff) 	<ul style="list-style-type: none"> ● On 9 November 2020, the French National Authority for Health issued a press release which stressed the importance of transparency among the general public in the vaccination-campaign process ● In partnership with the Economic, Social and Environmental Council, a citizen collective was announced on 16 January 2021 to help support the COVID-19 vaccination campaign <ul style="list-style-type: none"> ○ This panel consists of a total of 35 citizens ○ The aim of this panel will be to collate the concerns and queries 	<ul style="list-style-type: none"> ● COVID-19 vaccinations require an appointment to be made at a select vaccination centre ● The Government of France has authorized both medical practices and pharmacies to assist in vaccine administration ● Vaccinated individuals are still required to respect and follow public-health measures (e.g., face masks and physical distancing) 	<ul style="list-style-type: none"> ● Public Health France has stated that the vaccination campaign will be coupled with publicly available surveillance, monitoring and evaluation indicators <ul style="list-style-type: none"> ○ Surveillance systems will be updated to help track the percentage of individuals that have been vaccinated ○ Additional indicators, such as vaccine efficacy, vaccine-related opinions (e.g., vaccine intentions), and vaccine adherence will also be documented ○ Supervised by both the National Health Insurance Fund and

	<p>country that can safely store and administer them</p> <ul style="list-style-type: none"> • Ancillary supplies were mass ordered prior to the arrival of the COVID-19 vaccine <ul style="list-style-type: none"> ○ Pharmacies and hospitals are responsible for delivering these supplies to institutional care facilities (e.g., long-term care homes) • On 29 January 2021, the Oxford-AstraZeneca vaccine was approved for use in France • Medical practices will be distributing over 1.6 million doses of the Oxford-AstraZeneca vaccine by 12 March 2021 and pharmacies will be distributing an initial delivery of 67,000 doses of the vaccine • A shipment of 280,000 doses of the Oxford-AstraZeneca vaccine will be received during the week of 15 March 2021 	<ul style="list-style-type: none"> • Health authorities have broadened the eligible priority population groups in Phase 1 of the vaccine roll-out <ul style="list-style-type: none"> ○ As of 18 January 2021, this includes individuals aged 75 and older living at home and those under the age of 75 but have a high risk of contracting COVID-19 ○ As of 19 February 2021, this includes individuals aged 50 to 64 who are living with comorbidities (e.g., diabetes, cancer, hypertension) ○ As of 2 March 2021, this includes individuals aged 65 to 74 who are living with comorbidities (e.g., diabetes, cancer, hypertension) • According to the French National Authority for Health, the Ministry for Solidarity and Health recommends that the Pfizer-BioNTech and Moderna vaccines be administered to at-risk pregnant women, and individuals over 65 years old while the Oxford-AstraZeneca vaccine be delivered to at-risk (e.g., comorbidities) individuals aged 50 to 74, seniors aged 75 years and older, and professionals in the health and social sectors aged 18 to 64 years old 	<p>posed by the public and present them to the federal government</p>		<p>the General Directorate of Health, the “SI Vaccin Covid” system will be used for surveillance, monitoring, evaluation, and reporting of COVID-19 vaccine data</p> <ul style="list-style-type: none"> • Insights gleaned by the Economic, Social and Environmental Council found that the possibility of adverse side effects caused by the COVID-19 vaccine is the primary reason for hesitancy/rejection among participants
--	---	---	---	--	--

		<ul style="list-style-type: none">• As of 2 March 2021, the priority groups eligible to receive a COVID-19 vaccine consist of:<ul style="list-style-type: none">○ The elderly aged 75 and older○ Long-term care home residents and staff○ High-risk individuals (e.g., Trisomy 21, cancer, transplant patients, and rare diseases)○ Older adults in healthcare facilities and serviced residences○ Residents aged 60 and older in migrant worker homes○ Disability care home residents○ Healthcare professionals○ Individuals aged 50 to 74 who are living with comorbidities○ Individuals who have previously contracted COVID-19○ Pregnant or breastfeeding women• The two-dose Pfizer-BioNTech vaccine is only to be administered by nurses and physicians, and the second dose will be administered after 21 days• As of 10 March 2021, France has administered over 6,425,000 vaccines doses<ul style="list-style-type: none">○ 4,321,474 individuals have received their first dose			
--	--	--	--	--	--

		<p>(6.5% of the total population)</p> <ul style="list-style-type: none"> ○ 2,102,490 have been fully vaccinated (3.1% of the total population) • The Ministry for Solidarity and Health recommends that patients who have previously contracted COVID-19 wait at least three months, and preferably six months, prior to receiving a single dose of the COVID-19 vaccine 			
Germany	<ul style="list-style-type: none"> • If all vaccine candidates are approved for use, Germany will have secured a total of 300 million vaccine doses <ul style="list-style-type: none"> ○ 85 million doses of the Pfizer-BioNTech COVID-19 vaccine are expected to be available by the end of the year ○ Two million doses of the Moderna vaccine are expected to be received by the end of the first quarter ○ Within the first quarter of 2021, Germany is expected to receive between 11 and 13 million doses of the Pfizer-BioNTech vaccine and two million Moderna vaccine doses • Distribution of the Pfizer-BioNTech vaccine to federal states is based on the proportion of the 	<ul style="list-style-type: none"> • As of 10 March 2021, Germany has administered over 8.1 million vaccine doses <ul style="list-style-type: none"> ○ 6.1% of the population has received the first dose of the COVID-19 vaccine, and 3.1% of the German population has been fully vaccinated ○ Over 216,000 doses are administered each day ○ Over 5.5 million primary doses and 2.6 million second doses have been administered ○ Healthcare workers currently account for 45.0% of all administered doses ○ Nursing home residents account for a total of 18.5 % of all administered doses • Group 1, the highest priority group, is eligible to receive vaccines in the first stage: <ul style="list-style-type: none"> ○ Individuals aged 80 and older 	<ul style="list-style-type: none"> • The Government of Germany has launched a COVID-19 vaccine information campaign, “Germany Pulls Up Its Sleeves”, to help educate and inform the public <ul style="list-style-type: none"> ○ The first phase of the campaign focuses on raising awareness regarding priority populations ○ The campaign consists of educational videos, posters, and advertisements • A Communications Management Committee has been established on the federal level to help disseminate information relating to vaccine development, roll-out, and timelines 	<ul style="list-style-type: none"> • Vaccines are administered in vaccination centres and in care facilities by mobile teams during the centralized vaccination phases <ul style="list-style-type: none"> ○ Federal states are responsible for managing the operations of vaccination centres and ensuring safe management of vaccines • When Germany transitions into a decentralized vaccination phase, administration sites may expand to include medical institutions and general-practitioner clinics • In April 2021, medical practices are scheduled 	<ul style="list-style-type: none"> • According to the National COVID-19 Vaccination Strategy, the Robert Koch Institute will collate non-personal data from vaccinated individuals (e.g., age, sex, residence, place and date of vaccination, and vaccine details) into a web-based data portal • The Robert Koch Institute and Paul Ehrlich Institute will lead the surveillance and evaluation of COVID-19 vaccines • This will include monitoring: <ul style="list-style-type: none"> ○ Vaccination rates by conducting online surveys ○ Vaccine safety through routine pharmacovigilance, surveillance of pregnant women,

	<p>population that reside in those regions</p> <ul style="list-style-type: none"> ○ Pfizer-BioNTech will deliver the vaccine to one of the designated delivery centres, from where it will then be distributed to regional vaccination centres for administration ● COVID-19 vaccine distribution to medical practices follows: <ul style="list-style-type: none"> ○ Delivery from the federal government to wholesalers ○ Delivery from wholesalers to pharmacies ○ Delivery from pharmacies to physician clinics ● A statement by Pfizer-BioNTech on 10 February 2021, announced a new production plant has been created in Marburg, Germany, with the initial manufacturing process of the COVID-19 vaccine having commenced <ul style="list-style-type: none"> ○ It is projected that 250 million vaccine doses will be manufactured at this facility in the first half of 2021 ○ The estimated timeline for the distribution of the first batch of vaccines is April 2021 	<ul style="list-style-type: none"> ○ Healthcare workers in intensive care, accident, and emergency units, and ambulatory services ○ Staff/residents of pension, care and nursing homes ○ Nurses who care for at-risk patients ● Group 2 follows second and consists of: <ul style="list-style-type: none"> ○ Individuals between 70 and 80 years of age ○ At-risk individuals who may suffer a severe outcome (e.g., transplant patients, individuals with Trisomy 21, and dementia) ○ Close contacts of long-term care home residents ○ Public order units in law enforcement ○ Pregnant women ○ Individuals living in homeless shelters ○ As of 24 February 2021, this now includes elementary school, childcare, and day-care staff ● Group 3, which is the third-highest priority group, includes: <ul style="list-style-type: none"> ○ Individuals between the ages of 60 and 70 years ○ At-risk individuals with pre-existing medical conditions (e.g., obesity, liver disease or autoimmune condition) ○ Emergency medical-services staff (e.g., police officers and firefighters) 	<ul style="list-style-type: none"> ○ This committee will primarily be targeting priority groups including healthcare workers, vulnerable populations, and the general public 	<p>to be delivery sites for vaccine administration</p> <ul style="list-style-type: none"> ● An individual who suffers damage from the COVID-19 vaccine will receive care in accordance with the Federal Supply Act 	<p>short-term app-based cohort studies, and long-term hospital-based case-control studies</p> <ul style="list-style-type: none"> ○ Vaccine efficacy by using case reports ○ Digital health data
--	--	--	---	---	---

	<ul style="list-style-type: none"> • The Oxford-AstraZeneca vaccine was approved for use on 29 January 2021 • 5.6 million doses of the Oxford-AstraZeneca vaccine are scheduled to be delivered by April 2021 • As of 3 March 2021, Germany has received over 10.3 million vaccine doses through partnerships with Pfizer-BioNTech, Oxford-AstraZeneca, and Moderna 	<ul style="list-style-type: none"> ○ Staff in the education and judiciary sector ○ Staff in retail, the meat-processing industry and seasonal workers • According to the Standing Committee on Vaccination (STIKO), the Oxford-AstraZeneca vaccine requires two doses in a 12-week interval • According to the Permanent Vaccination Commission in Germany, individuals aged 65 years and younger should initially be vaccinated with the Oxford-AstraZeneca vaccine 			
Israel	<ul style="list-style-type: none"> • Distribution of Pfizer-BioNTech COVID-19 vaccine started in December 2020, where the government received permission from the manufacturers to repackage doses into tens or hundreds per shipment (instead of 1,000 per shipment) in order to avoid waste and create safer mobilization of doses to remote areas • According to Health Minister, Yuli Edelstein, Israel entered vaccine procurement negotiations early in the pandemic • Hospitals and medical facilities follow the distribution processes ascribed by their central 	<ul style="list-style-type: none"> • To simplify the implementation process, the Ministry of Health revised the vaccination allocation to include all Israeli residents aged 60 or older and all health workers from December 2020 to February 2021, with vaccines available to all Israeli residents after this phase • Additional doses due to overstock were communicated and administered to local individuals • As of 3 February, all residents aged 16 years and older became eligible for the COVID-19 vaccine • As of 8 March 2021, vaccination has begun for 100,000 Palestinians who work in Israel or are in Israeli settlements in the West bank, 	<ul style="list-style-type: none"> • Current priority and eligible population groups receive text messages from their health maintenance organizations (HMO) (health services that are provided to every citizen through a universal, compulsory medical insurance plan) about information on booking an appointment (either by phone or through the HMO online portal) • The Ministry of Health's website provides information to the general public on vaccine roll-out, priority groups for vaccine, and safety and efficacy 	<ul style="list-style-type: none"> • Roles and responsibilities for administering vaccines are organized according to the following: <ul style="list-style-type: none"> ○ four HMOs for vaccinating older adults aged 60 or older and individuals with chronic conditions ○ national emergency services organizations for vaccinating nursing home residents ○ hospitals and health insurers for vaccinating front-line health workers • Vaccination sites and portable immunization stations in remote areas 	<ul style="list-style-type: none"> • Israel has a single electronic medical record system that is shared and accessed by the four HMOs, which provided health data information to identify priority groups among all insured citizens • As of 17 January 2021, the Ministry of Health and Pfizer-BioNTech signed an agreement to share anonymized medical-record data between hospitals or health plans and research entities in order to measure vaccine roll-out, immunity • With the agreement, the Ministry of Health will receive weekly

	<p>health maintenance organizations (HMO)</p> <ul style="list-style-type: none"> Vaccines are repackaged to contain 300 doses or 60 doses, which are sent to national centres and subsequently repackaged in small boxes to ship three times a week to communities 	<p>with efforts to vaccinate 1,000 people per day</p> <ul style="list-style-type: none"> As of 9 March 2021, 58.2% of the population has received at least one dose of COVID-19 vaccine (with 45.5% of the population fully vaccinated) 	<ul style="list-style-type: none"> The Ministry of Health focused on tailored messaging to the general population on daily updates on the number of vaccinated individuals and addressing anti-vaccination messages on social media Endorsements from political and religious leaders encouraged the general population, and religious Orthodox Jewish and Muslim populations to get vaccinated respectively 	<p>are designated by the Ministry of Health with assistance from the military and local authorities</p> <ul style="list-style-type: none"> The Ministry of Health plans to provide vaccinations 24/7, with health plans responding by recruiting nurses for vaccine administration The Ministry of Health recruited community-based nurses, physicians, paramedics and EMTs to administer the vaccine Adverse-event reporting was conducted electronically, with individuals monitored for at least 15 minutes after vaccination or 30 minutes for individuals with history of anaphylaxis Professionals have access to a 24/7 call centre to ask for guidance and shipment information As of 21 February, university campuses and workplaces have launched vaccination As of 7 March 2021, fully vaccinated Israeli residents do not have to quarantine after entering the country 	<p>epidemiological reports on confirmed cases (total, by age, and other stratifications), hospitalizations, severe cases, ventilator use, number of deaths, symptomatic cases, and weekly number of vaccinations (total, by age, and other stratifications)</p> <ul style="list-style-type: none"> The Ministry of Health stated that for Israelis who received both doses of vaccine, 14 days after the second dose, vaccines were 98.9% effective at preventing death and hospitalizations caused by COVID-19, 99.2% effective against serious illness, and reduced morbidity by 95.8%
--	---	--	--	---	---

				<p>(while unvaccinated individuals are required to isolate in designated hotels or in an alternate location using an electronic bracelet)</p> <ul style="list-style-type: none"> • As restrictions continue to ease, the Ministry of Health unveiled a “Green Pass” system that allows fully vaccinated (one week after last dose) or those recovered from COVID-19 to enter specific businesses with a “green pass/certificate” and photo ID (failure to comply will result in a fine) • Israeli residents with a “green pass/certificate” can attend cultural and sports events, gyms, exhibitions, hotels, tourist areas, and worship houses (with restrictions) 	
New Zealand	<ul style="list-style-type: none"> • The New Zealand government has secured four pre-purchase agreements for COVID-19 vaccines <ul style="list-style-type: none"> ○ 750,000 courses from Pfizer-BioNTech ○ Five million courses from Janssen ○ 3.8 million courses from Oxford-AstraZeneca 	<ul style="list-style-type: none"> • New Zealand has prepared three different scenarios for vaccine roll-out based on the level of transmission present within country at the time of the roll-out <ul style="list-style-type: none"> ○ The scenarios illustrate that the higher the rate of transmission present, the more the allocation focus will be on close contacts of 	<ul style="list-style-type: none"> • Information on the COVID-19 vaccine roll-out, procedures for getting a vaccine, and the safety and effectiveness of the vaccines are posted on the New Zealand government’s official COVID-19 vaccine website 	<ul style="list-style-type: none"> • New Zealand is planning for an extra 2,000-3,000 full-time vaccinators to be trained and available throughout New Zealand during its vaccination campaign <ul style="list-style-type: none"> ○ Vaccinators will be sourced from non-practising nurses, 	<ul style="list-style-type: none"> • New Zealand’s National Immunisation Register is being replaced by the National Immunisation Solution to allow health workers to record vaccinations anywhere, anytime, and to fully support the COVID-19 roll-out

	<ul style="list-style-type: none"> ○ 5.36 million courses from Novavax • The government has secured enough vaccine doses to vaccinate the entire population of New Zealand as well as the Pacific Islanders • An inventory management system is being developed for COVID-19 vaccines that will store data on where vaccines are allocated, their volumes, temperatures, and expiration dates to minimize wastage • The Ministry of Health has purchased nine freezers to store more than 1.5 million doses of the Pfizer-BioNTech vaccine • Following the provisional approval of the Pfizer-BioNTech vaccine by Medsafe on 3 February 2021, the first doses arrived in Auckland on 15 February 2021 • Pfizer-BioNTech will be responsible for delivering all of its vaccines to New Zealand • New Zealand is reportedly due to receive 249,600 doses of Oxford-AstraZeneca vaccine through the COVAX facility, including a few 	<p>the infected and people most vulnerable to exposure</p> <ul style="list-style-type: none"> • The Ministry of Health is working in partnership with the Māori and Pacific neighbours to plan for their rollout programs • First priority for vaccination are border workers, the COVID-19 front-line healthcare workers, and their household contacts, with the expected timeline for vaccination of this group being the second quarter of 2021 <ul style="list-style-type: none"> ○ New Zealand expects to have the vaccination of its border workers completed within two to three weeks of initial vaccinations • The aim of New Zealand's government is to start vaccinating the general public in the second half of 2021 • Medsafe has recommended a dose interval of at least 21 days between the first and second doses of the Pfizer-BioNTech vaccine • At a press conference on 4 February 2021, the Minister of COVID Response said that they had been advised that Olympic athletes would need vaccination towards the middle of 2021 and it is anticipated that vaccines will be widely available in New 	<ul style="list-style-type: none"> • The Minister for COVID-19 Response said in a 27 January 2021 press conference that preparation is underway for a public awareness and reassurance campaign centred around vaccine safety that will include paid advertising • The New Zealand Ministry of Health has published information on its website about the safety, effectiveness and side effects of the Pfizer-BioNTech vaccine, how to get a vaccine (for border and MIQ workers), and what to expect at your vaccination 	<p>doctors or pharmacists, final-year medical, nursing or pharmacy students, and other health professionals who have vaccinations within their scope</p> <ul style="list-style-type: none"> • The Ministry of Health has contracted the Immunisation Advisory Centre to begin training health professionals in February 2021 on COVID-19 vaccine administration • On 10 March 2021, the Director-General of Health reported that more than 900 vaccinators have completed training to administer the Pfizer-BioNTech vaccine • A small group of vaccinators received their first doses of the Pfizer-BioNTech vaccine on 19 February 2021 as part of New Zealand's trial run for the roll-out of its vaccination program • New Zealand began vaccinating its border workers in Aotearoa on 20 February 2021 and in Wellington on 22 February 2021 	<ul style="list-style-type: none"> • According to the Prime Minister, New Zealand started with a gradual roll-out to test its distributions systems and logistical arrangements for transporting the Pfizer-BioNTech vaccine
--	---	---	---	---	---

	<p>doses in quarter one of 2021</p> <ul style="list-style-type: none"> • Over \$66 million has been allocated by the New Zealand government to support the roll-out of COVID-19 vaccines, including purchasing supplies to vaccinate the population and providing support to Pacific countries • New Zealand’s Prime Minister announced on 8 March 2021 that the government has decided to make Pfizer-BioNTech the country’s primary vaccine provider and has signed an advance purchasing agreement with Pfizer-BioNTech for an additional 8.5 million vaccine doses to bring their total order to 10 million doses, enough for New Zealand’s entire population to be fully vaccinated <ul style="list-style-type: none"> ○ The government is working on a delivery schedule with Pfizer-BioNTech to receive the additional doses in the second half of 2021 • The decision to make Pfizer-BioNTech New Zealand’s primary vaccine provider was based on the high degree of efficacy of the Pfizer-BioNTech 	<p>Zealand by that time for athletes to get vaccinated according to the vaccination timetable</p> <ul style="list-style-type: none"> • On 10 March 2021, the New Zealand government released its official COVID-19 vaccine roll-out plan with four main groups for phased vaccination: <ul style="list-style-type: none"> ○ Group 1 consists of 50,000 border and MIQ workers and their household contacts (vaccination began in February 2021) ○ Group 2 will include approximately 480,000 front-line workers and people living in high-risk settings (vaccination began in February 2021) ○ Group 3 will include approximately 1.7 million people who are at higher risk if they contract COVID-19 (vaccination anticipated to begin in May 2021) ○ Group 4 will consist of the remainder of the population (approximately 2 million people), starting from July 2021 • The government is negotiating with its Pacific neighbours to determine their specific preferences for vaccines • Every person in New Zealand will be eligible for free vaccination regardless of their immigration status, and any 		<ul style="list-style-type: none"> • Vaccination of the household contacts of border workers began on 9 March 2021 at the first large-scale COVID-19 vaccination clinic in New Zealand <ul style="list-style-type: none"> ○ Initially 150 people will be vaccinated a day at the clinic, but these numbers will ramp up over the next week ○ About 55,000 front-line health workers will be vaccinated in the next stage of the roll-out • The government has also partnered with some Māori and Pacific NGOs to set up small community vaccination clinics in South Auckland to support the roll-out of vaccines to household contacts of border and MIQ workers • An online tool will be launched soon to help people find out when they will be eligible for vaccination 	
--	---	---	--	---	--

	<p>vaccine and the simplification of the vaccine roll-out when only having to deal with administering one type of vaccine throughout the population</p> <ul style="list-style-type: none"> • The New Zealand government is still determining how to make use of other vaccines that it has already procured <ul style="list-style-type: none"> ○ Options under consideration include delaying delivery to New Zealand until 2022 and donating surplus vaccines to other countries ○ The government may consider procuring a vaccine that is more easily transported as a “backup option” to make vaccines more accessible for rural communities 	<p>information collected will not be used for immigration purposes</p>			
U.K.	<ul style="list-style-type: none"> • A U.K. Government Vaccination Taskforce was established in April 2020, and the task force signed deals to buy vaccines from multiple developers and suppliers • The task force also expanded the U.K.’s vaccine manufacturing capability to further increase vaccine production 	<ul style="list-style-type: none"> • In December 2020, the United Kingdom Government released advice on priority groups for COVID-19 vaccination, which reported that vaccination priorities should be the prevention of COVID-19 mortality, and the protection of health and social-care staff and systems • Secondary priorities should include vaccination of individuals at increased risk of 	<ul style="list-style-type: none"> • The U.K. government released a vaccine-delivery plan that stated that they are working at the national, regional and local levels to establish partnerships with authorities, communities, healthcare staff and patients to ensure that accessible information is available to the public 	<ul style="list-style-type: none"> • Three types of vaccination sites have been established: 1) vaccination centres using large-scale venues such as football stadiums; 2) hospital hubs; and 3) local vaccination services, using primary-care services and pharmacy teams 	<ul style="list-style-type: none"> • Adverse events and safety concerns following COVID-19 vaccine administration should be reported to the Medicines and Healthcare Products Regulatory Agency using the established Coronavirus Yellow Card reporting scheme

	<ul style="list-style-type: none"> • The U.K. has ordered more than 400 million doses of seven of the most promising vaccines, of which only three have been approved so far in the country – Oxford-AstraZeneca, Pfizer-BioNTech, and Moderna • The U.K. government has announced a deal with an eighth biopharmaceutical company, CureVac, and has placed an order for 50 million doses to be delivered later this year if required 	<p>hospitalization and increased risk of exposure, and to maintain resilience in essential services</p> <ul style="list-style-type: none"> • The order of priority of COVID-19 vaccination is: <ol style="list-style-type: none"> 1) residents in a care home for older adults and their carers; 2) all those aged 80 and over and front-line health and social-care workers 3) all those 75 years of age and over; 4) all those 70 years of age and over and clinically extremely vulnerable; 5) all those 65 years of age and over; 6) all individuals aged 16 to 64 with underlying health conditions which put them at a higher risk of serious disease and mortality; 7) all those 60 years of age and over; 8) all those 55 years of age and over; and 9) all those 50 years of age and over • The number of first vaccine doses administered each day has been increasing since December 2020, reaching more than 400,000 a day by mid-February • As of 9 March 2021, more than 22.5 million people have had a first vaccine dose and 	<ul style="list-style-type: none"> ○ It is also working to ensure that local implementation plans are tailored to support all individuals • The Mosques and Imams National Advisory Board is leading a campaign to reassure its faithful are among those publicly advocating that COVID-19 vaccinations are safe and compatible with Islamic practices 	<ul style="list-style-type: none"> • In largely rural areas, vaccination centres will be a mobile unit • To ensure that there is a sufficient workforce to deliver the vaccination program, changes to the Human Medicines Regulations now permit non-registered healthcare professionals to administer the COVID-19 vaccine • Local vaccination service sites are being run by a mixture of primary-care networks and community pharmacies • The vaccination campaign to reach as many people as possible was boosted by a shift in policy in early January, which prioritized the first dose of a vaccine, with a second dose up to 12 weeks later 	
--	---	---	--	--	--

		<p>more than 1 million have had a second dose</p> <ul style="list-style-type: none"> ○ As of 9 March 2021, all English regions except London have given the first dose of a vaccine to more than 90% of people aged 65 or over 			
U.S.	<ul style="list-style-type: none"> • The Department of Health and Human Services (HHS) and the Department of Defense (DoD) jointly lead a vaccine production and distribution strategy called Operation Warp Speed (OWS) <ul style="list-style-type: none"> ○ Its main goal is to deliver 300 million doses of safe and effective vaccines ○ Actions supporting OWS include HHS funding development and manufacturing of vaccine candidates, securing agreements to acquire vaccine doses, and building manufacturing capacity for successful vaccine candidates ○ DoD is partnering with the Centers for Disease Control and Prevention (CDC) and other parts of HHS to coordinate supply, production and distribution of vaccines 	<ul style="list-style-type: none"> • The CDC provided recommendations to federal, state and local governments about who should receive COVID-19 vaccines first based on recommendations from the Advisory Committee on Immunization Practices (ACIP) <ul style="list-style-type: none"> ○ On 1 December 2020, ACIP recommended that healthcare personnel and long-term care facility residents be vaccinated first (Phase 1a) • A subsequent update on 20 December 2020 recommended that Phase 1b include persons aged 75 or older and non-healthcare front-line essential workers, and that Phase 1c, include persons aged 65-74 years, persons aged 16-64 with high-risk medical conditions, and other essential workers not covered in Phase 1b • As of 9 March 2021, CDC reports that 127.9 million doses of COVID-19 vaccinations have been distributed 	<ul style="list-style-type: none"> • CDC updates and disseminates information about vaccine safety, effectiveness, allocation strategy and distribution process for the general public, as well as additional information for healthcare professionals 	<ul style="list-style-type: none"> • OWS's COVID-19 vaccine distribution process utilizes existing networks, partnerships and processes to provide access to vaccines across the United States as safely and quickly as possible • The Pfizer-BioNTech COVID-19 vaccines are being allocated across states and jurisdictions, that follow procedures for ordering first- and second-dose allocations • On 8 March 2021, the CDC released interim public-health recommendations for people who have been fully vaccinated for COVID-19 <ul style="list-style-type: none"> ○ Fully vaccinated people may visit other fully vaccinated people as well as unvaccinated people at low-risk for severe COVID-19 from a single household 	<ul style="list-style-type: none"> • The CDC, FDA and other federal partners have many existing systems and data sources to facilitate continuous safety monitoring of vaccines • The CDC and FDA have also expanded safety monitoring systems and strategies have been developed as an additional layer of safety monitoring to evaluate COVID-19 vaccine safety in real time • These additional strategies include a smartphone-based, post-vaccine health checker for those who have received COVID-19 vaccines called V-safe, which uses text messaging and web surveys from CDC to check in with vaccine recipients as well as provide second dose reminders if needed <ul style="list-style-type: none"> ○ They also include the CDC's National

	<ul style="list-style-type: none"> • On 12 February 2021, Pfizer-BioNTech announced that the U.S. government exercised its right to purchase an additional 100 million doses of the Pfizer-BioNTech COVID-19 Vaccine, bringing the total to 300 million • On 16 February 2021, Moderna provided a vaccine-supply update for the U.S., stating that it expects to deliver 100 million doses by March 2021 and an additional 100 million doses by the end of May 2021 • On 27 February 2021, the USDA issued an emergency use authorization for the Johnson & Johnson COVID-19 Vaccine • On 10 March 2021, reports surfaced that the Biden administration plans to buy an additional 100 million doses of the Johnson & Johnson COVID-19 Vaccine 	<ul style="list-style-type: none"> • As of 9 March 2021, the CDC reports that 95.7 million doses of COVID-19 vaccines have been administered 		<p>without wearing masks or physical distancing</p> <ul style="list-style-type: none"> ○ Fully vaccinated people do not have to quarantine or be tested after known exposure if they are asymptomatic ○ Otherwise, fully vaccinated people should continue to follow existing prevention measures, including wearing a mask and physical distancing 	<p>Healthcare Safety Network (NHSN), an acute and long-term care facility monitoring system, and the FDA monitoring other large insurer/payer databases to facilitate claims-based data</p>
