

Appendices for COVID-19 Living Evidence Profile #1

(Version 6: 20 April 2021)

Appendix 1: Methodological details

We use a standard protocol for preparing living evidence profiles (LEP) to ensure that our approach to identifying research evidence as well as experiences from other countries and from Canadian provinces and territories are as systematic and transparent as possible in the time we were given to prepare the profile.

Identifying research evidence

For each LEP, we search our continually updated [inventory of best evidence syntheses](#) and [guide to key COVID-19 evidence sources](#) for:

- 1) Guidelines (defined as providing recommendations or other normative statements derived from an explicit process for evidence synthesis);
- 2) full systematic reviews;
- 3) rapid reviews;
- 4) protocols for reviews or rapid reviews that are underway;
- 5) titles/questions for reviews that are being planned; and
- 6) single studies (when no guidelines, systematic reviews or rapid reviews are identified).

For the first version of this LEP, we also searched Health Systems Evidence (www.healthsystemsevidence.org) and HealthEvidence (www.healthevidence.org), to identify any relevant evidence documents that might have relevance to the COVID-19 vaccine roll-out, but were produced before the pandemic, given that the other sources searched were specific to COVID-19. In Health Systems Evidence, we searched for overviews of systematic reviews, systematic reviews of effects, systematic reviews addressing other questions, and protocols for systematic reviews, that may provide insights about vaccine-delivery systems by searching for ‘vaccine’ using the filters for ‘public health’ (under health-system sectors). In HealthEvidence, we searched using the categories for ‘Immunization’ and ‘Policy and Legislation’ under the intervention strategy filter combined with ‘Communicable Disease/Infection’ category under the topic filter.

Each source for these documents is assigned to one team member who conducts hand searches (when a source contains a smaller number of documents) or keyword searches to identify potentially relevant documents. A final inclusion assessment is performed both by the person who did the initial screening and the lead author of the rapid evidence profile, with disagreements resolved by consensus or with the input of a third reviewer on the team. The team uses a dedicated virtual channel to discuss and iteratively refine inclusion/exclusion criteria throughout the process, which provides a running list of considerations that all members can consult during the first stages of assessment.

During this process we include published, pre-print and grey literature. We do not exclude documents based on the language of a document. However, we are not able to extract key findings from documents that are written in languages other than Chinese, English, French or Spanish. We provide any documents that do not have content available in these languages in an appendix containing documents excluded at the final stages of reviewing.

Identifying experiences from other countries and from Canadian provinces and territories

For each LEP, we collectively decide on what countries to examine based on the question posed. For other countries we search relevant sources included in our continually updated guide to key COVID-19 evidence sources. These sources include government-response trackers that document national responses to the

pandemic. In addition, we conduct searches of relevant government and ministry websites. In Canada, we search websites from relevant federal and provincial governments, ministries and agencies (e.g., Public Health Agency of Canada).

While we do not exclude countries based on language, where information is not available through the government-response trackers, we are unable to extract information about countries that do not use English, Chinese, French or Spanish as an official language.

Assessing relevance and quality of evidence

We assess the relevance of each included evidence document as being of high, moderate or low relevance to the question. We then use a colour gradient to reflect high (darkest blue) to low (lightest blue) relevance.

Two reviewers independently appraised the quality of the guidelines we identified as being highly relevant using AGREE II. We used three domains in the tool (stakeholder involvement, rigour of development and editorial independence) and classified guidelines as high quality if they were scored as 60% or higher across each of these domains.

Two reviewers independently appraise the methodological quality of systematic reviews and rapid reviews that are deemed to be highly relevant. Disagreements are resolved by consensus with a third reviewer if needed. AMSTAR rates overall methodological quality on a scale of 0 to 11, where 11/11 represents a review of the highest quality. High-quality reviews are those with scores of eight or higher out of a possible 11, medium-quality reviews are those with scores between four and seven, and low-quality reviews are those with scores less than four. It is important to note that the AMSTAR tool was developed to assess reviews focused on clinical interventions, so not all criteria apply to systematic reviews pertaining to health-system arrangements or to economic and social responses to COVID-19. Where the denominator is not 11, an aspect of the tool was considered not relevant by the raters. In comparing ratings, it is therefore important to keep both parts of the score (i.e., the numerator and denominator) in mind. For example, a review that scores 8/8 is generally of comparable quality to a review scoring 11/11; both ratings are considered 'high scores.' A high score signals that readers of the review can have a high level of confidence in its findings. A low score, on the other hand, does not mean that the review should be discarded, merely that less confidence can be placed in its findings and that the review needs to be examined closely to identify its limitations. (Lewin S, Oxman AD, Lavis JN, Fretheim A. SUPPORT Tools for evidence-informed health Policymaking (STP): 8. Deciding how much confidence to place in a systematic review. *Health Research Policy and Systems* 2009; 7 (Suppl1):S8.

Preparing the profile

Each included document is hyperlinked to its original source to facilitate easy retrieval. For all included guidelines, systematic reviews, rapid reviews and single studies (when included), we prepare a small number of bullet points that provide a brief summary of the key findings, which are used to summarize key messages in the text. Protocols and titles/questions have their titles hyperlinked given that findings are not yet available. We then draft a brief summary that highlights the total number of different types of highly relevant documents identified (organized by document), as well as their key findings, date of last search (or date last updated or published), and methodological quality.

Appendix 2a: Key findings from new highly relevant evidence documents that address the question, organized by document type and sorted by relevance to the question and COVID-19

Type of document	Relevance to question	Key findings	Recency or status
Guidelines	<ul style="list-style-type: none"> • Allocating vaccines and ancillary supplies equitably <ul style="list-style-type: none"> ○ Allocation rules ○ People for whom vaccine safety and effectiveness has not yet been established 	<ul style="list-style-type: none"> • This guidance formulated by a task force of the Korean College of Rheumatology looks at recommendations regarding the efficacy and safety of COVID-19 vaccination in patients with autoimmune inflammatory rheumatic disease • The recommendations state the following: <ul style="list-style-type: none"> ○ Current available COVID-19 vaccines are considered safe and effective ○ The risk of autoimmune inflammatory rheumatic flare after vaccination is low ○ Every patient should receive one of the available COVID-19 vaccines, with the exception being those that cannot for medical reasons (e.g., prior allergy to COVID-19 vaccine components) ○ Patients should be monitored at least 15 minutes after vaccination for potential anaphylaxis ○ Patients should continue their immunosuppressive treatments after vaccination, including biological and targeted synthetic anti-rheumatic drugs ○ Public-health measures (e.g., hand hygiene, mask wearing, physical distancing) should be continued after vaccination <p>Source (low-quality AGREE II rating; Korean College of Rheumatology)</p>	Published 29 March 2021
	<ul style="list-style-type: none"> • Allocating vaccines and ancillary supplies equitably <ul style="list-style-type: none"> ○ Allocation rules • People for whom vaccine safety and effectiveness has not yet been established 	<ul style="list-style-type: none"> • The following guidelines were updated from when they were first published in December 2020 • The American College of Obstetricians and Gynecologists recommend that people considering future pregnancy, and currently pregnant or lactating should be offered a COVID- 	Published 24 March 2021

	<p>will pay the U.S. back with doses in the future</p> <ul style="list-style-type: none"> ○ In order for the doses to be received, Health Canada had to approve the sites where the vaccines were made in the U.S. ● On 5 March 2021, Canada approved the Johnson & Johnson COVID-19 vaccine, which is the first single dose vaccine to be approved <ul style="list-style-type: none"> ○ Canada has pre-ordered 10 million doses of the vaccine ○ On 9 April 2021, Canada’s Minister of Public Services and Procurement confirmed that Johnson & Johnson vaccines are on schedule to be delivered at the end of April, but could not confirm how many doses will be arriving ● Canada expects to receive more than one million doses of COVID-19 vaccines each week in April and May of 2021 and approximately 44 million doses of vaccines by the end of June 2021 ● An immunization National Operations Centre within the Public Health Agency 	<p>prioritization of key populations</p> <ul style="list-style-type: none"> ○ Under specific circumstances (e.g., when excess doses remain after immunizing all stage one groups in a facility), NACI acknowledges the benefit in vaccinating on-site stage-two populations in lieu of transporting remaining doses to another facility with stage-one individuals to avoid the risk of wastage during delivery ● The Government of Canada’s Planning guidance for administration of COVID-19 vaccine document stated that vaccines for second doses will be allocated at the same time as the first-dose quantities to ensure sufficient supply for the second dose at the appropriate interval after the first dose. ● The federal government reported that 36 million Canadians are expected to be vaccinated by the end of September 2021 	<ul style="list-style-type: none"> ● The Canadian government maintains a database of COVID-19 announcements (inclusive of updates on vaccine efficacy and procurement) on its website that can be filtered by announcement type (e.g., news releases), minister, and government institution ● The Canadian government also has a dedicated telephone line for providing COVID-19 information 		<p>safety in various age groups following vaccinations</p> <ul style="list-style-type: none"> ○ The Special Immunization Clinics Network, which manages patients with adverse events following immunizations ● Vaccination coverage across Canada is monitored by the government and reported on its website every Friday at 12 noon Eastern Standard Time ● The Angus Reid Institute for independent research in Canada conducts ongoing surveys and research on public opinions about the COVID-19 vaccine roll-outs across Canada and vaccination in general
--	---	--	--	--	--

	<p>of Canada was established as the federal logistical coordination entity for managing COVID-19 vaccine delivery and collaboration with provinces and territories for vaccine distribution</p> <ul style="list-style-type: none"> ○ The National Operations Centre is supported by a national team of experts and the Canadian Armed Forces ○ The National Operations Centre has 14 vaccine delivery sites across Canada, and FedEx Express Canada and Innomar Strategies are positioned to support the National Operations Centre with vaccine distribution ● The Government of Canada is responsible for securing storage facilities and ancillary supplies <ul style="list-style-type: none"> ○ A total of 75 million immunization supplies have been secured (e.g., syringes, needles, gauze, and sharps containers) ○ A total of 422 freezers have been purchased ● Following the approval by Health Canada for the extractions of six doses of vaccine from Pfizer- 	<ul style="list-style-type: none"> ● Most provinces have completed vaccinations in long-term care, or are close to doing so, and vaccinations will now be expanded to seniors living independently ● On 3 March 2021, the NACI issued new guidance advising that the time between shots for the Pfizer-BioNTech, Moderna, and Oxford-AstraZeneca vaccines be extended to four months in order to vaccinate, and hopefully protect, more people <ul style="list-style-type: none"> ○ NACI’s Advisory Committee reconfirmed this recommendation in its updated guidance on 7 April 2021 ● NACI stated that their recommendations are guidance and not rules, and that the provinces and territories can tailor their vaccination roll-out campaigns to each region ● After a series of changing advice, NACI recommended on 29 March 2021 that Canadian provinces pause the use of the Oxford-AstraZeneca 			
--	---	---	--	--	--

	<p>BioNTech vaccines rather than five, the federal government ordered 64 million of the special syringes required to extract the additional dose</p> <ul style="list-style-type: none"> On 16 March 2021, the federal government announced that it is investing millions of dollars in domestic biomanufacturing companies to boost future vaccine and medicine development capacity 	<p>vaccine on people under the age of 55 because of evidence of safety concerns of blood clots caused by the vaccine reported in Europe</p> <ul style="list-style-type: none"> As of 12 April 2021, Health Canada has confirmed distribution of 11,399,542 COVID-19 vaccines to the provinces and territories <ul style="list-style-type: none"> 7,204,062 doses of Pfizer-BioNTech vaccine 2,000,980 doses of Moderna vaccine 2,194,500 doses of Oxford-AstraZeneca vaccine A shipment of approximately 317,000 doses of Oxford-AstraZeneca vaccines procured from the COVAX facility were received in Canada on 8 April 2021 As of 13 April 2021, 78.7% of doses delivered to Canada have been administered <ul style="list-style-type: none"> 7,703,437 first doses and 819,131 second doses of COVID-19 vaccine have been administered 			
--	---	---	--	--	--

		<ul style="list-style-type: none"> As of 15 April 2021, about 22% of the Canadian population has been vaccinated with at least one dose of COVID-19 vaccine 			
British Columbia	<ul style="list-style-type: none"> In January 2021, British Columbia's Centre for Disease Control released a plan for vaccine distribution which stated that the province is preparing for a range of COVID-19 vaccines with varying distribution methods British Columbia is actively preparing for these vaccines by securing freezer capacity Health Officials also reported that between April and June an average of 203,077 doses are expected to be administered per week, and early indications suggest that between July and September 471,538 doses will be administered per week 	<ul style="list-style-type: none"> The Government of British Columbia reported that it is working closely with the Provincial Health Services Authority, First Nations Health Authority, Health Emergency Management BC, Canadian Red Cross and Canadian Armed Forces to prepare a system that is ready to receive and distribute all vaccine types as they become approved and available British Columbia's Centre for Disease Control released a plan for vaccine distribution which stated that the first groups to be vaccinated will be residents, staff and essential visitors to long-term care residents; individuals waiting for a long-term care placement; healthcare workers providing care for COVID-19 patients; First Nations 	<ul style="list-style-type: none"> ImmunizeBC has provided evidence-based immunization and tools specific to COVID-19 for residents of British Columbia British Columbia's Centre for Disease Control and the Government of British Columbia have created designated public webpages that contain vaccine and eligibility FAQs, information sheets, a COVID-19 Digital Assistant Chat Box, and links to the online vaccine registration and booking system 	<ul style="list-style-type: none"> The third phase of the province's COVID-19 roll-out plan is occurring at immunization clinics throughout the province including school gymnasiums, arenas, convention halls, community halls and mobile clinics As of 8 April 2021, vaccinations for the Oxford-AstraZeneca are being administered to those aged 55 to 65 at pharmacies in Lower Mainland, Vancouver Island, the Interior, and Northern B.C to ensure timely uptake and administration Vaccination appointments for front-line priority workers are organized by employers, with appointment information being communicated directly to each employer and sector On 23 February 2021, the Provincial Health 	<ul style="list-style-type: none"> British Columbia's Centre for Disease Control reported that they will closely monitor COVID-19 vaccine safety, uptake and effectiveness and report adverse events following vaccination to the Public Health Agency of Canada Vaccine providers in British Columbia are asked to refer to the B.C. Centre for Disease Controls' reporting adverse events following immunization resource British Columbia's Centre for Disease Control has created a public dashboard displaying vaccination dosage rates in the province

		<p>communities in remote and isolated locations</p> <ul style="list-style-type: none"> • The vaccination program will then expand to include community-based seniors; individuals experiencing homelessness or using shelters; adults in group homes or mental health residential care; long-term care home support recipients and staff; hospital staff, community physicians and medical specialists; Indigenous communities not vaccinated in the first stage • On 1 March 2021, British Columbia health officials decided to follow NACI recommendations, and expand the interval between vaccine doses to four months, which will go into effect as of 8 March 2021 • Since 29 March 2021, B.C. health officers have suspended the use of the Oxford-AstraZeneca vaccine for those under the age of 55 in British Columbia following recommendations by Canada's National 		<p>Officer also reported that a public-health order was issued to expand the number of health professions able to administer a COVID-19 vaccine</p> <ul style="list-style-type: none"> ○ Dentists, paramedics, midwives, pharmacy technicians and retired nurses are now among those who can join the vaccination work force over the next six months • Healthcare practitioners can sign up as immunizers and join a registry maintained by the Ministry of Health to support the COVID-19 emergency response • As of 10 April 2021, 170 mass-vaccination sites across the province are in operation • Provincial Health Officials reported that mobile clinics in self-contained vehicles will be available for some rural communities and for people who are homebound due to mobility issues • On 15 March 2021 the province opened mass-immunization clinics 	
--	--	---	--	--	--

		<p>Advisory Committee on Immunization</p> <ul style="list-style-type: none"> • As of 11 April 2021, the province is in Phase 3 of its immunization plan where people born in or before 1961 (60+), Indigenous peoples born in or before 2003 (18+), and people aged 16 to 74 who are considered clinically vulnerable may call and book a vaccine appointment • As of 9 April 2021, people born between 1956 and 1966 can book an appointment for the Oxford-AstraZeneca vaccine at participating pharmacies throughout the province • As of 12 April 2021, people born in or before 1966 may register for the vaccine • As of 14 April 2021, people born in or before 1971 may register for the vaccine • As of 16 April 2021, people born in or before 1976 may register for a vaccine, and as of 19 April 2021, people born in or before 1981 or earlier may register for a vaccine 		<ul style="list-style-type: none"> • The province opened the “Get Vaccinated” online registration and vaccine booking system for the general public on 6 April 2021 	
--	--	---	--	--	--

		<ul style="list-style-type: none"> • Health officials reported that all eligible adults should receive at least their first vaccine by the end of June 2021 • As of 12 April 2021, there has been a total of 1,403,510 doses delivered and the province has received enough of the vaccine to give 27% of its population a single dose <ul style="list-style-type: none"> ○ The province has used 73.03% of its available vaccine supply • As of 12 April 2021, British Columbia has reported that 1,025,019 doses have been given and the province has administered doses at a rate of 199.747 per 1,000 population 			
Alberta	<ul style="list-style-type: none"> • Forecasted weekly allocations for the Pfizer-BioNTech and the Moderna vaccines for Alberta are updated regularly on the Government of Canada's website • The Alberta government has a policy describing the requirements for storing and handling the Pfizer-BioNTech and Moderna vaccines, as well as 	<ul style="list-style-type: none"> • Alberta began its vaccination roll-out in December 2020 with a phased approach to vaccinating prioritized groups <ul style="list-style-type: none"> ○ Phase 1a group (started in December 2020): workers and residents of acute-care sites in Edmonton and Calgary with the highest COVID-19 concerns (e.g., front- 	<ul style="list-style-type: none"> • Alberta Health Services has a COVID-19 immunization booking webpage and a Frequently-asked Questions page on their website that is regularly updated with information on the COVID-19 vaccination roll-out and how to book an appointment • The government of Alberta's COVID-19 	<ul style="list-style-type: none"> • COVID-19 immunization facilities will be designated by AHS in congregate-care settings • The AHS will collaborate with Indigenous Services Canada to designate congregate-care services on reserve • Alberta Health Services has an online booking tool for eligible 	<ul style="list-style-type: none"> • Alberta's Immunization Regulation requires health practitioners to report immunizations electronically to Alberta Health within a week, effective 1 January 2021 • Alberta Health Services provides a COVID-19 Client

	<p>vaccines that require storage between 2°C and 8°C</p> <ul style="list-style-type: none"> ○ Although Health Canada approved eased temperature requirements for the Pfizer-BioNTech vaccine, Alberta continues to follow the original guidelines for transport and storage of the vaccine ● In a recent interview, an executive director in Alberta Health Services' (AHS) central zone described how COVID-19 vaccines are moved in the province from the airport to people's arms ○ All of Alberta's vaccine supply is flown into Calgary International Airport and AHS staff check the shipments to make sure that the cold-chain temperature did not get disrupted during transport ○ Contracted courier companies transport the vaccines from the airport to 36 vaccine-storage sites set up around the province that are capable of administering vaccines 	<p>line healthcare workers and residents of long-term care homes)</p> <ul style="list-style-type: none"> ○ Phase 1b group (started in February 2021): Seniors 75 years and older as well as First Nations, Inuit, Métis, and persons 65 years and older living in a First Nations community or Métis settlement ● Alberta released its plan for Phase 2 vaccinations on 19 February 2021 <ul style="list-style-type: none"> ○ Group A: anyone aged 65 to 74, First Nations and Métis people aged 50 and older, staff of licensed supportive-living facilities not included in Phase 1 (began 15 March) ○ Group B: Albertans aged 16 to 64 with high-risk underlying conditions (began 30 March) ○ Group C: Residents and staff in congregate-living settings, healthcare workers who have a high potential for spread, and caregivers who are most at risk 	<p>vaccine program webpage provides information on:</p> <ul style="list-style-type: none"> ○ The number of vaccines administered in the province ○ Adverse events following immunization reported ○ Access to the appointment portal for booking vaccinations ○ Resources for seniors who need transportation to and from their vaccine appointments ○ Vaccine safety and the vaccine approval process ○ Details on the province's phased vaccine roll-out, including timelines ○ Who should and should not get vaccinated ● The province also communicates with Albertans through their social-media handles and regular news conferences and releases 	<p>healthcare workers to book immunization appointments</p> <ul style="list-style-type: none"> ○ Eligible healthcare workers will receive an email with a link to book their immunization appointment online ● Alberta's guideline for COVID-19 vaccination provides advice for individuals who may experience reactions after immunization, including calling a Health Service hotline ○ The guideline also describes infection prevention-and-control measures for vaccination venues and healthcare practitioners, including frequent disinfecting and use of PPE ● Starting 19 February 2021, Alberta Health Services (AHS) began vaccinating residents 75 years and older in retirement centres, lodges, supportive living facilities, and other congregate-living facilities 	<p>Immunization Record for individuals who have been administered a COVID-19 vaccine</p> <ul style="list-style-type: none"> ● Adverse events following immunization (AEFI) are reported to Alberta Health and Alberta Health Services and posted on Alberta's COVID-19 vaccine distribution website
--	---	--	---	--	--

	<ul style="list-style-type: none"> ○ In the case where vaccines need to be transported from storage sites to other sites, like pharmacies, the vaccines are thawed and transported within a limited six-hour window ○ Thawed Pfizer-BioNTech vaccine can be stored in refrigerators at administration sites for up to five days and thawed Moderna vaccine for up to 30 days ○ Additional complications that must be managed include that both the Pfizer-BioNTech and the Moderna vaccines must be used within six hours of the vaccine vials being punctured, and the Pfizer-BioNTech vaccine must be diluted with sodium chloride prior to administration 	<p>of severe outcomes (began 12 April)</p> <ul style="list-style-type: none"> ○ Group D: Albertans aged 50 to 74 and First Nations and Métis people aged 35 to 49 on and off reserve (anticipated to begin in May) ● Details on Phase 3 of the vaccine roll-out will be provided at a future date ● On 29 March 2021, Alberta temporarily paused the administration of the Oxford-AstraZeneca vaccine for people under 55 years old after rare blood clots were reported in people in Europe several days after taking the vaccine ● Alberta adjusted its roll-out of Oxford-AstraZeneca vaccines during Phase 2 following changes to recommendations on use of the vaccine by NACI ○ Starting 6 April 2021, Albertans aged 55 to 64 who do not have underlying health conditions became eligible to receive the vaccine 		<ul style="list-style-type: none"> ● As of 12 April 2021, eligible individuals in Phases 1, 2A, 2B, and 2C of the vaccine roll-out are able to book appointments for vaccination through the AHS online booking tool or by calling 811 ● A tool has been provided to help eligible individuals find a pharmacy that is providing COVID-19 vaccinations in the province ● At a press conference on 12 April 2021, Alberta's Prime Minister announced that the province is administering vaccines in more than 1,300 pharmacies and 103 clinics <ul style="list-style-type: none"> ○ The Prime Minister also said that Alberta is on track to distribute over 300,000 vaccine doses per week if supplies allow ● Starting 10 March 2021, eligible Albertans were able to book first dose appointments only in accordance with the province's decision to 	
--	---	---	--	--	--

		<ul style="list-style-type: none"> • On 4 March 2021, Alberta’s Minister of Health announced that the province will follow NACI’s recommendations and delay the interval between the first and second doses of COVID-19 vaccines to 16 weeks as of 10 March 2021, in order to give more Albertans access to first doses of COVID-19 vaccines more quickly <ul style="list-style-type: none"> ○ All existing second dose appointments made for individuals who received their first doses prior to 10 March 2021 will be honoured • According to the Minister of Health at a press conference on 8 March 2021, Alberta has reached a milestone of being the first Canadian province to fully vaccinate every resident of long-term care and designated supportive living • As of 12 April 2021, Alberta has received 1,208,955 doses of COVID-19 vaccines 		<p>extend the second dose interval to 16 weeks</p> <ul style="list-style-type: none"> ○ Individuals will receive a reminder from AHS or participating pharmacies to book a second dose appointment at a later date <ul style="list-style-type: none"> • Alberta’s Immunization record provides post-vaccination care instructions, including a list of potential side effects, contact information for Health Link, and a reference to the COVID-19 Self-Assessment for Albertans if unusual side effects persist 	
--	--	---	--	---	--

		<p>from the Government of Canada</p> <ul style="list-style-type: none"> As of 11 April 2021, Alberta has administered 932,258 doses of COVID-19 vaccines <ul style="list-style-type: none"> 176,941 Albertans have been fully vaccinated with two doses 			
Saskatchewan	<ul style="list-style-type: none"> Forecasted weekly allocations for the Pfizer-BioNTech and the Moderna vaccines for Saskatchewan are updated regularly on the Government of Canada's website Efforts have been made to secure COVID-19 vaccine storage equipment (freezers, fridges, power generators) for Saskatchewan First Nations communities 	<ul style="list-style-type: none"> Saskatchewan began its phased COVID-19 vaccination plan in December 2020 A pilot program was conducted on 15 December 2020 where 1,950 healthcare workers were vaccinated with their first dose of the Pfizer-BioNTech vaccine <ul style="list-style-type: none"> Second doses were received 21 days later during Phase 1 of the vaccination plan After completing the pilot program, Saskatchewan began Phase 1 of its vaccine roll-out, which prioritizes front-line healthcare workers, long-term care residents and staff, residents over age 70, and residents over age 50 living in remote/northern Saskatchewan 	<ul style="list-style-type: none"> The Saskatchewan government provides weekly press briefings, COVID-19 news releases, and a number of resources on its website about COVID-19 vaccines and distribution The Saskatchewan plan indicates that the government's communication focuses on vaccine safety, accurate immunization information, prioritization of vaccination groups, and the importance of maintaining existing public-health measures <ul style="list-style-type: none"> Information will be included in local and social media, direct mail, posters, and news conferences The Saskatchewan Health Authority 	<ul style="list-style-type: none"> During the pilot phase of its COVID-19 immunization plan, 1,950 doses of the Pfizer-BioNTech vaccine were administered to healthcare workers on 15 December 2020 <ul style="list-style-type: none"> Pilot vaccine recipients received their second dose 21 days later during Phase 1 All vaccine doses were transported to and administered at Regina General Hospital Phase 1 immunizations are taking place in long-term care homes, communities in the Far North, and vaccination sites approved by the SHA Electronic and paper copies of COVID-19 immunization records 	<ul style="list-style-type: none"> Measures have been taken to ensure that Saskatchewan's immunization administration system, Panorama, can record, store and manage COVID-19 vaccination records and enable reminders for second-dose follow-ups Vaccination records are stored electronically on MySaskHealthRecord

		<ul style="list-style-type: none"> ○ Allocations of the Pfizer-BioNTech vaccine for these groups began to be received on 22 December 2020 ○ The Moderna vaccine has been allocated to the Far North Region of Saskatchewan ● The Saskatchewan government announced on 16 February 2021 that the Ministry of Health added more healthcare workers to the priority list in Phase 1, including individuals who will be directly involved in delivering COVID-19 vaccinations in Phase 2 of the roll-out ● Phase 2 began on 18 March 2021 and focuses on vaccinating the general population in 10-year age increments, with targeted vaccinations being administered in select congregate living and extremely clinically vulnerable populations <ul style="list-style-type: none"> ○ The goal of the Saskatchewan government is for all residents being vaccinated during Phase 2 to be able to 	<p>launched a website with information on COVID-19 vaccine drive-thru and walk-in sites as well as their wait times</p>	<p>are made available for vaccinated individuals</p> <ul style="list-style-type: none"> ● Up to 2,200 people will be involved in administering COVID-19 vaccines during Phase 2, and approximately 675 healthcare workers will be redeployed to deliver vaccines ● The Saskatchewan government intends for vaccines to be administered by physicians, nurse practitioners, and pharmacists in Phase 2 ● A staff scheduling system has been launched to allow all SHA employees to opt-in for alerts on when they will be eligible to receive the COVID-19 vaccine ● A scheduling system has been developed that provides access to an online booking tool for vaccinations and a toll-free telephone line that allows residents to book appointments with a phone agent ● Saskatchewan's immunization system, Panorama, will be updated to set reminders 	
--	--	--	---	---	--

		<p>access vaccines where they live and work</p> <ul style="list-style-type: none"> • On 13 April 2021, the government added pregnant women, young adults ages 16 and 17 who are clinically extremely vulnerable, and everyone over the age of 40 in the far north to the Phase 2 priority groups • As of 8 April 2021, individuals aged 55 and older in Saskatchewan became eligible to book vaccination appointments <ul style="list-style-type: none"> ○ The eligible age for booking vaccination appointments online was lowered from 55 to 52 province-wide on 14 April 2021 • Eligibility was expanded on 13 April 2021 at the Regina drive-thru vaccination clinic to residents ages 49 to 54 only in response to increasing COVID-19 transmission risk in that region • On 12 April 2021, the Saskatchewan government announced that several groups will be prioritized for COVID-19 vaccination 		<p>for second-dose follow-ups</p> <ul style="list-style-type: none"> • Plans are underway to open 230 vaccination clinics in 180 communities throughout rural, urban and northern Saskatchewan • Saskatchewan opened its first drive-thru and walk-in immunization site in Regina on 3 April 2021 and its second on 5 April 2021 <ul style="list-style-type: none"> ○ Several more sites opened during the week of 12 April 2021 • Eligible residents for vaccination at the Regina drive-thru vaccination clinic are vaccinated on a first-come first served basis • In addition to mass immunization sites, the province has made an agreement with the Pharmacy Association of Saskatchewan to follow the influenza immunization model to administer COVID-19 vaccines in pharmacies <ul style="list-style-type: none"> ○ This agreement establishes the fee for pharmacist delivery of COVID-19 vaccines along with increases in 	
--	--	---	--	--	--

		<ul style="list-style-type: none"> ○ First responders, such as police officers and firefighters, will be targeted by mobile vaccination units following completion of the targeted vaccination of individuals who are extremely vulnerable ○ However, vaccination of Regina police officers already began on 10 April 2021 in response to a significant increase in transmission of COVID-19 variants in the region ○ Once they begin receiving vaccines, pharmacies will be offering vaccines to all pharmacy and grocery store staff working in the facilities where vaccines are offered ● Unused vaccines from Phase 1 of the roll-out have also been allocated to the remaining healthcare workers not included in Phase 1 ● Following the national advice not to give the Oxford-AstraZeneca vaccine to people under age 55, Saskatchewan 		<p>dispensing fees for prescription drugs and influenza vaccines for the 2021 flu season</p> <ul style="list-style-type: none"> ● Extremely vulnerable individuals who are now eligible to be vaccinated must book their appointments over the phone as the online booking system is aged-based and will not allow those under the eligible age range to book 	
--	--	--	--	--	--

		<p>suspended administration of the vaccine to individuals under 55 years as of 30 March 2021</p> <ul style="list-style-type: none"> • Saskatchewan requires two doses of vaccine per person and both first and second doses must be of the same vaccine • Once an individual becomes eligible for vaccination in Saskatchewan, they will continue to be eligible even if the province has moved on to a different phase of the roll-out • As of 12 April 2021, Saskatchewan has received 334,325 doses of COVID-19 vaccines from the Government of Canada • As of 12 April 2021, 290,921 doses have been administered in Saskatchewan <ul style="list-style-type: none"> ○ 249,447 first doses ○ 41,474 second doses • Beginning 5 March 2021, all vaccines administered in Saskatchewan will be a first dose, and second doses will be administered within an interval of up to four months 			
--	--	--	--	--	--

		<ul style="list-style-type: none"> ○ This delayed second-dose strategy does not apply to long-term care and personal-care residents and staff who have not received their second doses. or to any existing scheduled second-dose appointments 			
Manitoba	<ul style="list-style-type: none"> ● Manitoba directly signed a deal to procure up to two million doses of a vaccine (that is currently in the first phase of human trials) being developed by Providence Therapeutics ● Manitoba has procured 400 shipping containers for transporting vaccines and 200 specialized freezers and fridges ● The province has procured more than 80,000 syringes, which enable the extraction of six doses per vial of the Pfizer-BioNTech vaccine ● The province maintains a complex data set to link vaccine deliveries with inventory levels and known appointments 	<ul style="list-style-type: none"> ● Manitoba established a trilateral table on vaccine planning, including health experts, senior officials from Indigenous Services Canada, and the Canadian Armed Forces ● In addition to the table, the province states there will be smaller fora established to advance priority issues and ensure dialogue to navigate prioritization for First Nations on- and off-reserve ● A Vaccine Implementation Task Force and Vaccine Medical Advisory Table have been established ● The province released detailed eligibility criteria for Stages 1 to 4 of the vaccine roll-out on 27 January 2021 ● At supersites and pop-up clinics in Manitoba, all 	<ul style="list-style-type: none"> ● Manitoba maintains a constantly updated webpage dedicated to outlining in detail the specific groups of people currently eligible to book an appointment and receive a vaccine ● Manitoba has released clinical practice guidelines for vaccine use in special populations and issued a memo to healthcare providers regarding enhanced consent for special populations ● The province released an interactive vaccine queue calculator for residents to understand their place in the vaccine priority line ● The province has released a Supersite operational manual ● As of 10 February 2021, Manitoba had 225 	<ul style="list-style-type: none"> ● Manitoba plans for six modular and scalable models of vaccine delivery: a pilot site, supersites, focused immunization teams, pop-up/mobile sites, First Nations sites, and distributed delivery ● As of 31 March 2021, the province has the capacity to administer 20,918 doses per day (assuming adequate supply) ● A 28-day campaign was launched to vaccinate all eligible personal care home residents in 135 sites across Manitoba, using focused immunization teams who visit locations in all regional health authorities <ul style="list-style-type: none"> ○ This campaign used the Moderna and 	<ul style="list-style-type: none"> ● Manitoba participates in the Public Health Agency of Canada’s Canadian Adverse Events Following Immunization Surveillance System ● Reports of adverse events following immunization are received by regional Medical Officers of Health from providers and the provincial pediatric hospital-based Immunization Monitoring Program ACTive (IMPACT) ● Regional Medical Officers of Health make recommendations based on these reports and forward them to the vaccine

		<p>adults aged 60 and older; First Nations people aged 40 and older; and a range of individuals aged 18 and older working in high-risk health and social-care settings are currently eligible</p> <ul style="list-style-type: none"> ○ The eligibility criteria for vaccination in Manitoba depends on the type of delivery site, with different criteria applied at different types of sites ● At medical clinics and pharmacies, the following groups are currently eligible for vaccination with the Oxford-AstraZeneca vaccine: people aged 55 to 64 years of age with a specific high-risk health condition (defined on one of the province's priority lists for vaccination) and people aged 65 and older who may face barriers accessing a supersite or pop-up site ○ Two priority lists for high-risk conditions have been established, and individuals with conditions on the first priority list are to be 	<p>phone-line agents and plans to expand to 300 agents in March</p> <ul style="list-style-type: none"> ● As of 9 April 2021, 67% of appointment bookings were made over the phone with others being booked through the online appointment portal ● Manitoba launched the #ProtectMB campaign to encourage vaccine uptake <ul style="list-style-type: none"> ○ The campaign includes a dedicated website, an e-mail newsletter, and targeted advertising ○ The program is based on research about the province's vaccine-intent profile ○ The research has identified groups that are keen to get vaccinated, those who are likely to get vaccinated but are not in a rush, and those who are ambivalent/concerned about vaccination ○ Data-driven advertising is being used and is initially going to be targeted at those who are keen 	<p>Pfizer-BioNTech vaccines</p> <ul style="list-style-type: none"> ● Focused immunization teams have administered second doses to all personal-care home residents in the province ● As of 10 March 2021, focused immunization teams were focused on congregate-living settings, with priority given to sites with the most vulnerable residents ● Staff working in personal-care homes and congregate-living settings are to be vaccinated at fixed vaccination sites ● Supersites are currently in operation in Winnipeg, Brandon, Thompson, Selkirk, and Morden, with plans to open a second site in Winnipeg on 7 May 2021 ● Supersites serve the dual purpose of administering vaccination while also serving as distribution hubs for focused immunization teams and pop-up/mobile clinics ● Pop-up clinics are being launched to serve northern and rural communities 	<p>recipient's immunization provider and Manitoba Health, Seniors and Active Living.</p> <ul style="list-style-type: none"> ● Manitoba is maintaining a dashboard with key vaccine-distribution metrics available ● Manitoba is reporting phone appointment-booking waiting times, as well as patient processing and several other operationally relevant time metrics for one supersite ● Manitoba is also reporting time-use metrics for Focused Immunization Teams ● The Public Health Information Management System is used to track individuals' public health records, including immunization records and is being used to ensure patient safety and
--	--	---	--	--	--

		<p>offered vaccination before those with conditions on priority list two</p> <ul style="list-style-type: none"> • On 29 March 2021, the province limited the use of the Oxford-AstraZeneca vaccine to individuals aged 55 to 64 due to concerns regarding blood clots, but on 7 April 2021 the decision was made to allow use amongst those aged 65 and older (particularly those who face barriers accessing sites where other vaccines are offered) • The province is modelling vaccine roll-out and distribution projections under high-supply and low-supply scenarios <ul style="list-style-type: none"> ○ Under a low-supply scenario the vaccination campaign would run into June 2021 while under a high-supply scenario (which assumes availability of the Janssen and Novavax vaccines) the vaccination campaign would run into May 2021 	<p>and likely to share information in their networks (this demographic skews older and female)</p> <ul style="list-style-type: none"> ○ To continually refine the campaign’s strategy, the province is using EngageMB (the provincial public engagement platform), monitoring trends in vaccine uptake, and continuing to conduct research ○ A #ProtectMB coordinating table has been established that includes Data Science, Public Health, Communications and Engagement, and Vaccine Task Force officials to guide the campaign and determine its informational needs • The province has established a ‘vaccine shot finder’ webpage with a map to aid individuals in finding pharmacies and medical clinics participating in the vaccination campaign 	<ul style="list-style-type: none"> ⊖ The locations and operating hours of these time-limited clinics are detailed on the province’s vaccination website • Eligible Manitobans can call a dedicated phone line to book vaccination appointments at pop-up sites and use the phone lines or the online booking portal • A distributed model of doctors’ offices and pharmacists is expected to administer 25% of daily doses in the second quarter, subject to approval of suitable vaccines <ul style="list-style-type: none"> ○ As of 7 April 2021, 18% of Manitoba’s vaccine doses have been distributed via the distributed channel model (pharmacies and medical clinics) ○ As of 9 April 2021, the vaccine allocation to clinics and pharmacies was under 150 doses • Focused Immunization Teams and Pop-up Clinics will each administer less than 5% 	<p>monitor progress during the COVID-19 vaccination campaign</p> <ul style="list-style-type: none"> • Manitobans who have been vaccinated can access their individual immunization record online with their health card number and email address • Family doctors also have access to immunization records
--	--	--	--	--	--

		<ul style="list-style-type: none"> • As of 12 April 2021, Manitoba has administered 284,643 total vaccine doses <ul style="list-style-type: none"> ○ This represents 20.1% of adults aged 18 and older being vaccinated • On 12 April 2021 the province had scheduled 5,264 doses to be administered • As of 12 April 2021, 36,232 vaccine doses had been allocated to First Nations communities <ul style="list-style-type: none"> ○ As of 8 April 2021, a majority (63.1%) of these allocated doses had been administered on reserves • A vaccine delivery schedule has been published, and delivery numbers are confirmed up to the week of 24 May 2021 <ul style="list-style-type: none"> ○ Between the weeks of 12 April 2021 and 24 May 2021, 42,000 doses of the Moderna vaccine, 260,700 doses of the Pfizer-BioNTech vaccine, and zero doses of the Oxford-AstraZeneca vaccine are expected to arrive 	<ul style="list-style-type: none"> ○ The map distinguishes between sites that are and are not currently taking appointments 	<p>of daily doses in the second quarter and will respond to needs</p> <ul style="list-style-type: none"> • A pilot project at ‘Vaxport’ was opened in Thompson to provide immunization for residents of remote northern First Nations, and municipal and Indigenous and Northern Affairs communities <ul style="list-style-type: none"> ○ The pilot project at Vaxport has concluded and it now serves as a backup location for the Thompson supersite • A time-limited clinic in Winnipeg was opened to provide vaccination for First Nation health-care workers, Knowledge Keepers and Traditional Healers • The province is receiving applications from community pharmacists and physicians interested in providing COVID-19 vaccination, using vaccines that do not need freezing <ul style="list-style-type: none"> ○ Several eligibility criteria for medical clinics and pharmacies have been outlined,
