

COVID-19 Living Evidence Synthesis #6 (Version 21: 06 October 2021)

Question

What is the efficacy and effectiveness of available COVID-19 vaccines for variants of concern?

Findings

For vaccine effectiveness in variants of concern (VOC), we present a [visual summary of evidence in Table 1](#) and [detailed statements in Table 2](#).

Methods are presented in Box 1 and in the following appendices:

- 1) [reference list](#)
- 2) [glossary](#)
- 3) [data-extraction template](#)
- 4) [process for assigning variant of concern to studies](#)
- 5) [research question and critical appraisal process](#)
- 6) [detailed description of the narrative summary statement](#).

Overall, 221 studies were appraised and 85 used to complete this summary. The [reasons for excluding](#) the remaining 136 studies are reported in the second section of Appendix 2.

6 new studies have been added since the previous edition of this living evidence synthesis, all of which are signaled by a last-updated date of 06 October 2021 (highlighted in yellow). The new studies included results for VOC Alpha¹ [B.1.1.7] (2), VOC Beta to VOC Delta [B.1.351] (1); VOC Alpha to VOC Delta (2), and VOC Delta [B.1.617.2] (1).

Box 1: Our approach

We retrieved candidate studies and updates to living evidence syntheses on vaccine effectiveness using the following mechanisms: 1) PubMed via COVID-19+ Evidence Alerts; 2) systematic scanning of pre-print servers; 3) updates to the COVID-END inventory of best evidence syntheses; and 4) cross-check with updates from the VESPa team. We included studies and updates to living evidence syntheses identified up to two days before the version release date. We did not include press releases unless a preprint was available. A full list of included and excluded studies is provided in **Appendix 1**. A glossary is provided in **Appendix 2**.

Prioritized outcome Measures: Infection, severe disease (as defined by the study investigators), death, and transmission.

Data extraction: We prioritized variant-confirmed and vaccine-specific data over total study population data (variant assumed and/or vaccine unspecified). We extracted data from each study in duplicate using the template provided in **Appendix 3**. Relevance to VOC is determined directly, when reported by study authors, or indirectly where reasonable assumptions can be made about the variant prevalent in the jurisdiction at the time of the study as described in **Appendix 4**.

Critical appraisal: We assessed risk of bias, direction of effect, and certainty of evidence. **Risk of bias:** assessed in duplicate for individual studies using an adapted version of ROBINS-I. **Direction of vaccine effect:** “prevented” or “protects” was applied to mean estimates or range of mean estimates of effect that are greater than or equal to 50% (the lowest acceptable limit for vaccine effectiveness as determined by WHO). **Certainty of evidence:** assessed for the collection of studies for each vaccine according to variant of concern using a modified version of GRADE. Details of the research question for this synopsis and the critical appraisal process are provided in **Appendix 5**.

Summaries: We summarized the evidence by presenting narrative evidence profiles across studies, with or without pooling, as appropriate. A template for the summary statements used on page 1 under “Findings” and in Table 1 under each VOC is provided in **Appendix 6**.

We update this document every Wednesday and post it on the COVID-END website.

¹ As of August 9, inclusion of Alpha studies may be temporarily delayed to permit resource allocation to Delta.

Pfizer/Comirnaty [BNT162b2]

We have moderate certainty evidence that 2 doses of BNT162b2 prevented infection (range of mean estimates: 70 to 97%), prevented severe disease (range of mean estimates: 92 to 98%), prevented death (range of mean estimates: 91 to 99%), and reduced transmission of VOC **Alpha** to close contacts (range of mean estimates: 65 to 80%).

We have moderate certainty evidence that 2 doses of BNT162b2 prevented symptomatic infection from VOC **Beta** (range of mean estimates: 84 to 88%).

We have low certainty evidence that 2 doses of BNT162b2 prevented infection from VOC **Delta** (range of mean estimates: 42 to 80%); moderate certainty evidence it prevented symptomatic infection from VOC Delta (range of mean estimates: 62 to 94%); and low certainty evidence it prevented severe, critical, or fatal disease from VOC Delta (range of mean estimates: 93 to 98%).

We have low certainty evidence that BNT162b2 prevented symptomatic disease from VOC **Gamma** (range of mean estimates: 84 to 88% - 2 reports from the same study population).

Moderna/Spikevax [mRNA-1273]

We have moderate certainty evidence that 2 doses of mRNA-1273 prevented infection from VOC **Alpha** (range of mean estimates: 86 to 100%) and low certainty evidence it prevented infection from VOC Beta (96.4% [95% CI, 92 to 99] – 1 Obs). We have low certainty evidence that it prevented severe, critical, or fatal disease from VOC Alpha (combined with Beta) (95.7% [95% CI, 73.4 to 99.9] – 1 Obs).

We have moderate certainty evidence that 2 doses of mRNA-1273 prevented infection from VOC **Delta** (range of mean estimates: 74 to 86%) and low certainty evidence that it prevented severe, critical, or fatal disease (range of mean estimate: 93 to 100%).

We have low certainty evidence that 2 doses of mRNA-1273 prevented symptomatic infection from VOC **Delta** (90.3% [95% CI, 67.2 to 97.1] – 1 Obs).

We have low certainty evidence that 2 doses of mRNA-1273 prevented symptomatic infection from VOC **Gamma** (88% [95% CI, 61 to 96] – 1 Obs).

AstraZeneca/Vaxzevria [ChAdOx1]

We have moderate certainty evidence that 2 doses of ChAdOx1 prevented infection from VOC **Alpha** (range of mean estimates: 62 to 79%) and moderate certainty evidence that it provided limited protection from infection by VOC Beta (10.4% [95% CI, -76.8 to 54.8]- 1 RCT).

We have low certainty evidence that 2 doses of ChAdOx1 prevented infection from VOC **Delta** (range of mean estimates: 60 to 67%) and moderate certainty evidence it prevented symptomatic infection from VOC Delta (range of mean estimates: 61 to 70%). We have low certainty evidence that 2 doses of ChAdOx1 prevented ICU admission (99.2% [95% CI, 97.6 to 99.7] – 1 Obs*) and low certainty evidence it prevented death (range of mean estimates: 97 to 99.6%).

We have low certainty evidence one dose of ChAdOx1 provided limited protection against symptomatic infection against VOC **Gamma** (48% [95% CI, 28 to 63] – 1 Obs). *combined with Alpha

Other vaccines

We have moderate certainty evidence that **Johnson & Johnson [AD26.COV2.S]** prevented severe disease from VOC **Beta** (81.7% [95% CI, 46.2 to 95.4] - 1 RCT). We have low certainty evidence that AD26.COV2.S prevented infection from VOC **Delta** (51% [95% CI, -2 to 76] – 1 Obs).

We have moderate certainty evidence that 2 doses of **Novavax [NVX-Co2373]** prevented symptomatic infection from VOC **Alpha** (86.3% [95% CI, 71.3 to 93.5] - 1 RCT) and moderate certainty evidence that it prevented symptomatic infection from VOC **Beta** (43% [95% CI, -9.8 to 70.4] - 1 RCT).

We have low certainty evidence that 2 doses of **Sinovac [CoronaVac]** prevented symptomatic infection due to VOC **Delta** (59% [95% CI, 16 to 81.6] – 1 Obs) and prevented severe infection (range of mean estimates: 89 to 100%) due to VOC **Delta**.

We have low certainty evidence that 2 doses of **CoronaVac** prevented infection from VOC **Gamma** (65.9% [95% CI, 65.2 to 66.6] – 1 Obs).

We have low certainty evidence that 2 doses of **Sinopharm [BBIBP-CorV]** prevented ICU admission (95.4% [95% CI, 94.6 to 96.2] – 1 Obs*) from VOC **Delta** and low certainty evidence it prevented death (94.3% [95% CI, 93.1 to 95.4] – 1 Obs*).

We have low certainty evidence that 2 doses of **Gamaleya [Sputnik V]** prevented ICU admission (100% [95% CI, 99.2 to 100] – 1 Obs*) from VOC **Delta** and low certainty evidence it prevented death (99.5% [95% CI, 98.5 to 99.9] – 1 Obs*).

Combinations of vaccines

We have low certainty evidence that 1 dose of **AstraZeneca [ChAdOx1]** followed by 1 dose of **Pfizer [BNT162b2]** or **Moderna [mRNA-1273]** prevented infection by VOC **Alpha** (88% [95% CI, 83 to 92] – 1 Obs).

Table 1: Visual summary of evidence for COVID-19 vaccines for variants of concern

Percentages indicate level of effectiveness from 0% (no effect) to 100% (full protection): ranges of estimated means are provided when ≥ 1 study is available; estimated mean value is provided for single studies

Colour indicates level of certainty based on the evidence

High certainty evidence = pooling of moderate to high quality RCTs or pooling of observational studies with low risk of bias and with consistent findings

Moderate certainty evidence = single RCT of moderate to high quality or \geq one observational study with low to moderate risk of bias and with at least partially consistent findings

Low certainty evidence = single RCT of low quality or single observational study of any quality or multiple low or moderate observational studies with inconsistent findings

Outcome (and vaccine)	Vaccine Effectiveness (2 doses unless otherwise stated) for each combination of vaccine, variant, and outcome			
	Alpha	Beta	Gamma	Delta
Any Infection				
Pfizer	70 to 97%			42 to 80%
Moderna	86 to 100%	96%		74 to 86%
AstraZeneca	62 to 79%	10%**		60 to 67%
Johnson & Johnson				51%
Novavax				
CoronaVac			66%	
AZ/PF or MOD	88%			
Symptomatic Infection (reported when data on “any infection” is limited)				
Pfizer		84 to 88%	84 to 88%	62 to 94%
Moderna			88%	90%
AstraZeneca			48%*	61 to 70%
Johnson & Johnson				
Novavax	86%	43%**		
CoronaVac				59%
Transmission				
Pfizer	65 to 80%			
Moderna				
AstraZeneca				
Johnson & Johnson				
Novavax				
CoronaVac				
Severe Disease (may include death for some studies)				
Pfizer	92 to 98%			93 to 98%
Moderna	96%	96%		93 to 100%
AstraZeneca				99% ICU admit
Johnson & Johnson		82%*		
Novavax				
CoronaVac				89 to 100%
Sinopharm				95% ICU admit

Sputnik V				100% ICU admit
Outcome (and vaccine)	Vaccine Effectiveness (2 doses unless otherwise stated) for each combination of vaccine, variant, and outcome			
	Alpha	Beta	Gamma	Delta
Death				
Pfizer	91 to 99%			
Moderna				
AstraZeneca				97 to 100%
Johnson & Johnson				
Novavax				
CoronaVac				
Sinopharm				94%
Sputnik V				99%

*single dose

**mean estimate of effect less than the lowest acceptable limit for vaccine effectiveness as determined by WHO

AZ, AstraZeneca; MOD, Moderna; PF, Pfizer

Table 2: Key findings about vaccine effectiveness

Vaccine	Effectiveness	Findings
Pfizer/ BioNTech Comirnaty [BNT162b2]	From COVID-NMA	<p>Compared to placebo, vaccination with BNT162b2 reduces the incidence of symptomatic cases of COVID-19 and probably reduces severe and critical disease substantially, although there remains uncertainty about the effect on mortality; it may increase the incidence of severe adverse events. Review of RCTs (AMSTAR 10/11); <i>last search date 2021-09-03</i>; GRADE evidence profile updated on 2021-09-17.</p> <p>[BNT162b2 to complete vaccination scheme started with Astra Zeneca vaccine] Synthesis pending. Review of RCTs (AMSTAR 8/9); <i>last search date 2021-09-17</i>.</p> <p>[BNT162b2 to complete vaccination scheme started with Astra Zeneca at 28 days vs two doses Astra Zeneca separated by 28 days] Compared to vaccination with Astra Zeneca vaccine, having a second dose of BNT16b2 after a first dose of Astra Zeneca may not increase the risk of any adverse event, while the incidence of serious adverse events is uncertain. Review of RCTs (AMSTAR 10/11); <i>last search date 2021-09-17</i>; GRADE evidence profile updated on 2021-07-19</p>

Iorio A, Little J, Linkins L, Abdelkader W, Bennett D, Lavis JN. COVID-19 living evidence synthesis #6 (version 6.21): What is the efficacy and effectiveness of available COVID-19 vaccines in general and specifically for variants of concern? Hamilton: Health Information Research Unit, 6 October 2021.

The COVID-19 Evidence Network to support Decision-making (COVID-END) is supported by an investment from the Government of Canada through the Canadian Institutes of Health Research (CIHR). To help Canadian decision-makers as they respond to unprecedented challenges related to the COVID-19 pandemic, COVID-END in Canada is preparing rapid evidence responses like this one. The opinions, results, and conclusions are those of the evidence-synthesis team that prepared the rapid response, and are independent of the Government of Canada and CIHR. No endorsement by the Government of Canada or CIHR is intended or should be inferred.

Appendix 1: Reference list

Section 1: included studies				
Ref	Author	Bottom line	ROBINS-I*	Design, Notes
*Note: ROBINS-I score risk of bias: Low risk of bias indicates high quality				
1	Dagan	BNT162b2 showed VE 46% (95% CI, 40 to 51) against infection 14 to 20 days after 1 st dose and VE 92% (95% CI, 88 to 95) 7 days after 2 nd dose.	Moderate	Data-linkage study in Israel; .5 M matched participants (2 M excluded – also (possible overlap with Haas); time and setting for VOC Alpha (estimated 80%).
2	Haas	BNT162b2 showed VE 95.3% (95% CI, 94.9 to 95.7) against infection; VE 97.5% (95% CI, 97.1 to 97.8) against severe or critical COVID-19-related hospitalization; VE 96.7% (95% CI, 96.0 to 97.3) against death 7 days after 2 nd dose.	Serious	Data-linkage study in Israel; >6.5 M matched participants (possible overlap with Dagan) Updated May 14 due to final publication; sample confirmed VOC Alpha (estimated 94%).
3	Kustin	BNT162b2 showed lower relative VE (2.4:1) against Alpha. after 1 st dose; and lower VE (8:1) against Beta after 2 nd dose in a population with >90% of Alpha and <1% Beta	Moderate	Case-control study in Israel; small sample for Beta (no overlap CHS cohort); confirmed VOC Alpha and Beta.
4	Madhi	ChAdOx1 nCoV-19 showed VE 10.4% (95% CI, -76.8 to 54.8) against mild to moderate disease 14 days after 2 nd dose.	Moderate quality (RCT)	RCT in South Africa; Underpowered for 20% efficacy (42 cases); VOC Beta.
5	Emery	ChAdOx1nCoV-19 showed VE 61.7% (95% CI, 36.7 to 76.9) against infection by VOC Alpha ≥ 15 days after 2 nd dose.	Moderate quality (RCT)	RCT in UK; neutralization of Alpha 9 times lower; no sequencing for 45% of cases; 52 cases (19%) had VOC Alpha.
6	Shah	ChAdOx1nCoV-19 or BNT162b2 reduced infection in unvaccinated household contacts of vaccinated HCW by about 30% (HR, 0.70, 95% CI, 0.63 to 0.78) ≥ 14 days after 1 st dose; ChAdOx1nCoV-19 or BNT162b2 reduced infection in HCW by about 55% (HR 0.45, 95% CI, 0.42 to 0.49) and hospitalization by 84% (HR 0.16, 95% CI, 0.09 to 0.27) ≥ 14 days after 1 st dose.	Moderate	Data-linkage study in Scotland - (25% of cases had received 2 doses); time and setting for VOC Alpha.
7	Sadoff	Single dose Ad26.COVS.2.S showed VE 52.0% (95% CI, 30.3 to 67.4) at 14 days and VE 64.0% (95% CI, 41.2 to 78.7) at 28 days against moderate to severe disease and VE 81.7% (95% CI, 46.2 to 95.4) at 28 days against severe disease (VOC Beta in South Africa).	Moderate quality (RCT)	RCT; over 40,000 participants; Argentina, Brazil, Chile, Colombia, Mexico, Peru, South Africa, and the United States; 86 of 91 cases sequenced for VOC Beta.

8	Andrejko	BNT162b2 or mRNA-1273 showed VE 58.9% (95% CI, -9.7 to 84.5) at 15 days after 1 st dose, and VE 85.7% (95% CI, 67.2 to 93.9) 15 days after 2 nd dose against infection.	Moderate	Test-negative-ase-positive random sampling matched control study in California; 645 participants; 69% of population at time had VOC Alpha or Epsilon.
9	Glampson	ChAdOx1nCoV-19 showed VE 74% (95% CI, 65 to 81) against infection 28 days after 1 st dose. BNT162b2 showed VE 78% (95% CI, 73 to 82) against infection 28 days after 1 st dose.	Moderate	Retrospective cohort in UK; 2M participants; 389,587 vaccinated (58% Pfizer, 42 AZ); time and setting for VOC Alpha.
10	Pritchard	ChAdOx1nCoV-19 or BNT162b2 showed VE 66% (95% CI, 59 to 72%) 21 days after 1 st dose and 78% (95% CI, 68 to 85%) after 2 nd dose against infection.	Moderate	Prospective cohort in UK; 370,000 participants; sample confirmed VOC Alpha.
11	Hall (SIREN)	BNT162b2 vaccine showed VE of 70% (95% CI, 55 to 85) 21 days after 1 st dose and 85% (95% CI, 74 to 96) 7 days after 2 nd dose against infection in HCW.	Moderate	Prospective cohort with standardized testing for HCW over all of England; 23,000 participants; time and setting for VOC Alpha
12	Shrotri *Delayed exclusion – critical ROB	Similar effect sizes were seen for ChAdOx1 (aHR 0.32, 95% CI, 0.15 to 0.66) and BNT162b2 (aHR 0.35, 95% CI, 0.17 to 0.71) at 35-48 days after 1 st dose.	Critical	Prospective cohort in England: 9160 of 10412 frail LTC residents, 66% Pfizer, 33% AZ; routine screening; time and setting for VOC Alpha
13	Hyams	1 st BNT162b2 showed VE 71.4% (95% CI, 43.1 to 86.2) against hospitalization 14 days after 1 st dose; ChAdOx1nCoV-19 showed VE 80.4% (95% CI, 36.4 to 94.5) against hospitalization 14 days after 1 st dose for 80+. When effectiveness analysis for BNT162b2 was restricted to the period covered by ChAdOx1nCoV-19, the estimate was 79.3% (95% CI, 47.0 to 92.5).	Moderate	Test negative case-control study in Scotland. Single center; 466 participants, 80+; time and setting for VOC Alpha
14	Harris	BNT162b2 or ChAdOx1 reduced likelihood of transmission by 40-50% for household contacts of HCW 21 days after 1 st dose.	Moderate	Data-linkage and case-control study in England; 338,887 participants; time and setting for VOC Alpha
15	Goldberg	Prior infection (in unvaccinated) has similar VE against infection [94.8%], and severe illness [96.4%] as two doses of BNT162b2.	Serious	Data-linkage study in Israel; 6,351,903 participants; likely overlaps with Dagan and Haas; time and setting for VOC Alpha

16	Cavanaugh *Delayed exclusion – VOI instead of VOC	VE 66.2% (95% CI, 40.5% to 80.8%) against infection among LTC residents and 75.9% (95% CI, 32.5% to 91.4%) among HCW. VE 94.4% (95% CI, 73.9% to 98.8%) against hospitalization among residents; no HCW were hospitalized. Three residents died, two of whom were unvaccinated (VE 94.4%; 95% CI, 44.6% to 99.4%).	Critical	Outbreak analysis in LTC in Kentucky; small number of events; VOI R.1
17	Shinde	NVX-CoV2372 VE showed VE 50.4% (95% CI, 16.6 to 70.5) against symptomatic infection 7 days after 2 nd dose.	Moderate quality (RCT)	RCT in South Africa; 4387 participants; 38/41 cases VOC Beta
18	Hitchings	CoronaVac showed VE of 35.1% (95% CI, -6.6 to 60.5) against infection in HCW after 1 st dose.	Moderate	Case-control study in HCWs in Manaus; 53,176 participants; 75% prevalence of Gamma; 776 (28%) of 2797 PCR were used for the case-controls; rate of previous infection high in the population
19	Heath	NVX-CoV2373 showed VE 89.7% (95% CI, 80.2 to 94.6) against infection after 2 nd dose. No hospitalizations or deaths in vaccinated group.	Moderate quality (RCT)	RCT; 15,187 participants in UK Post hoc: VE 86.3% (95% CI, 71.3 to 93.5) against Alpha variant; 10 cases in vaccinated participants; 66 infections confirmed Alpha; 11 infections no sequencing available
20	Ismail	BNT162b2 showed VE 81% (95% CI, 76 to 85) against hospitalization 28 days after 1 st dose and 93% (95% CI, 89 to 95) 14 days after the 2 nd dose for people 80+. ChAdOx1 showed VE 73% (95% CI, 60 to 81) against hospitalization 28 days after 1 st dose; sample size too small to report VE after 2 nd dose for people 80+.	Moderate	Screening study in UK; 13,907 hospitalized patients; results for age 80+; time and setting for VOC Alpha
21	Bernal (2) *Delayed exclusion – critical ROB	BNT162b2 showed VE 44% (95% CI, 32 to 53) after 1 st dose and 69% (95% CI, 31 to 86) after 2 nd dose against symptomatic infection in 70+. Single dose ChAdOx1 showed VE 55% (95% CI, 41 to 66) against death.	Critical	Data-linkage study in England; 48,096 cases above age 70+; 12.7% BNT162b2 and 8.2% ChAdOx1; VE also reported for 80+ and LTC; time and setting for VOC Alpha
22	Chodick	BNT162b2 showed VE 90% (95% CI, 79 to 95) against infection and VE 94% (95% CI, 88 to 97) against death 7-27 days after 2 nd dose; 71% (95% CI, 37 to 87) in immunosuppressed.	Moderate	Data-linkage study in Israel (Maccabi Health Care Organization); 1,178,597 participants; compared time

				frames to estimate effectiveness against Alpha
23	Chung	BNT162b2 or mRNA-1273 showed VE 61% (95% CI, 56 to 66) against symptomatic infection by VOC Alpha 14 days after 1 st dose and 90% (95% CI, 85 to 94) 7 days after 2 nd dose; 43% (95% CI, 22 to 59) against symptomatic infection by VOC Beta or Gamma 14 days after 1 st dose and 88% (95% CI, 61 to 96) 7 days after 2 nd dose.	Moderate	Test-negative study in Ontario 324,033 participants; limitations in symptom collection; screening for variants started 2 months into study period; results also reported for age>70 and according to vaccine (but not according to confirmed variant)
24	Bailly *Delayed exclusion – critical ROB	BNT162b2 showed VE 50% (95% CI, 34 to 73) against infection with VOC Beta >28 days after 2 doses.	Critical	Outbreak in a single LTC in France; 90 participants; all samples genome sequenced for VOC Beta; 2 deaths in vaccinated group
25	Angel	BNT162b2 showed VE 97% (95% CI, 94 to 99) against symptomatic infection and 86% (95% CI, 69 to 93) against asymptomatic infection \geq 7 days after 2 doses in HCW.	Moderate	Retrospective cohort at a single centre tertiary medical centre in Israel, 6,710 participants; testing strategy was different between vaccinated and unvaccinated; time and setting for VOC Alpha
26	Bianchi	BNT162b2 showed VE 61.9% (95% CI, 19.2 to 82) against infection 14 to 20 days after 1 st dose; 96% (95% CI, 82.2 to 99.1) \geq 7 days after 2 nd dose in HCW.	Moderate	Data-linkage, single centre medical centre in Italy, 2,034 participants; time and setting for VOC Alpha
27	Yassi	BNT162b2 (93%) or mRNA-1273 showed VE 37.2% (95% CI, 16.6 to 52.70) against infection by VOC Beta or Gamma 14 to 42 days after 1 st dose and 79.2% (95% CI, 64.6 to 87.8) 7 days after 2 nd dose in HCW.	Moderate	Data-linkage, 25,558 Canadian HCW; evenly split between VOC Gamma and VOC Beta by end of study period
28	Bernal (1)	BNT162b2 showed VE 60% (95% CI, 40 to 73) against confirmed symptomatic infection by VOC Alpha at least 28 days after 1 st dose and 90% (95% CI, 84 to 94) at least 14 days after 2 nd dose for people 70+.	Serious	Test-negative in England, 156,930 participants; spike gene target failure as proxy for confirmed VOC Alpha
29	Bernal (3)	BNT162b2 showed VE 47.5% (95% CI, 41.6 to 52.8) at least 21 days after 1 st dose and VE 93.7% (95% CI, 91.6 to 95.3) at least 14 days after 2 nd dose against symptomatic infection by confirmed VOC Alpha. ChadOx1 showed VE 48.7% (95% CI, 45.2 to 51.9) at least 21 days after 1 st dose and VE 74.5% (95% CI, 68.4 to 79.4) at least 14 days after 2 nd dose	Serious	Test-negative in England; 19,109 sequenced cases: 14,837 Alpha and 4,272 Delta.

		<p>against symptomatic infection by confirmed VOC Alpha.</p> <p>BNT162b2 showed VE 35.6% (95% CI, 22.7 to 46.4) at least 21 days after 1st dose and VE 88% (95% CI, 85.3 to 90.1) at least 14 days after 2nd dose against symptomatic infection by confirmed VOC Delta.</p> <p>ChAdOx1 showed VE 30% (95% CI, 24.3 to 35.3) at least 21 days after 1st dose and VE 67% (95% CI, 61.3 to 71.8) at least 14 days after 2nd dose against symptomatic infection by confirmed VOC Delta.</p>		
30	Ranzani	CoronaVac reduced risk of symptomatic infection by VOC Gamma VE 41.6% (95% CI, 26.9 to 63.3) \geq 14 days after 2 nd dose for people 70+.	Moderate	Test-negative in Brazil; 44,055 participants; sequencing not performed; effectiveness declined with age; time and setting for VOC Gamma
31	Andrejko (2)	BNT162b2 and mRNA-1273 showed VE 86.8% (95% CI, 68.6 to 94.7) and VE 86.10% (95% CI, 69.1 to 93.9), respectively, against infection 15 days after 2 nd dose.	Moderate	Test-negative in California; 1,023 participants; expansion of sample size and timeline since previous study by same authors; self-reported vaccine receipt; VOC Alpha, Epsilon
32	Emborg	BNT162b2 showed VE 53-86% against infection across high-risk groups, VE 75-87% against hospitalization across high-risk groups, VE 89% (95% CI, 81 to 93) against death in LTCF residents and VE 97% (95% CI, 88 to 99) against death in 65+ requiring personal care 7 days after 2 nd dose.	Serious	Data-linkage population study of high-risk groups in Denmark; 864,096 participants; sample confirmed VOC Alpha
33	Salo	BNT162b2 showed VE 42.9% (95% CI, 22.3 to 58.1) against infection in unvaccinated household members of vaccinated HCW 10 weeks after 1 st dose.	Moderate	Data-linkage for household contacts of HCW in Finland; 52,766 spouses of vaccinated HCW; time and setting for VOC Alpha
34	Shrestha	BNT162b2 or mRNA-1273 showed VE 97.1% (95% CI, 94.3 to 98.5) against infection \geq 14 days after 2 nd dose (based on multivariable model).	Moderate	Retrospective cohort of employees of a health care system in Ohio; 46,866 participants (60%) vaccinated by end of study; time and setting for VOC Alpha
35	Skowronski	BNT162b2 (85%) or mRNA-1273 showed VE 67% (95% CI, 57 to 75) against infection by confirmed VOC Alpha \geq 21 days after 1 st dose for 70+.	Serious	Test-negative in Canada; 16,993 specimens; out of 1,131 genetically sequenced: 45% VOC Alpha and 28% Gamma;

		BNT162b2 (85%) or mRNA-1273 showed VE 61% (95% CI, 45 to 72) against infection by confirmed VOC Gamma \geq 21 days after 1 st dose for 70+.		limitations in symptom collection and assessment for covariates; results reported by vaccine but not according to confirmed variant
36	Abu-Raddad	BNT162b2 showed VE 89.5% (95% CI, 85.9 to 92.3) against infection, VE 100% (95% CI, 81.7 to 100) against any severe, critical, or fatal disease by VOC Alpha \geq 14 days after 2 nd dose. BNT162b2 showed VE 75% (95% CI, 70.5 to 78.9) against infection, VE 100% (95% CI, 73.7 to 100) against severe, critical, or fatal disease by VOC Beta \geq 14 days after 1 st dose.	Serious	Test-negative in Qatar; 17,293 cases; sequencing showed 50% VOC Beta and 45% VOC Alpha between February-March 2021
37	Akrass *Delayed exclusion - failure to report outcomes of interest for this LES	BNT162b2 or mRNA-1273 showed overall VE 60.4% (95% CI, 30 to 77.6) against symptomatic infection \geq 14 days after 1 st dose; BNT162b2 or mRNA-1273 showed overall VE 95.7% (95% CI, 90 to 98.2) against symptomatic infection \geq 14 days after 2 nd dose.	Critical	Retrospective cohort of HCW at a single centre in Kentucky, USA; 2,134 participants; time and setting for VOC Alpha
38	Sheikh	BNT162b2 showed VE 30% (95% CI, 17 to 41) against confirmed VOC Delta infection and VE 33% (95% CI, 15 to 47) against symptomatic infection at least 28 days after 1 st dose; VE 79% (95% CI, 75 to 82) against infection and VE 83% (95% CI, 78 to 87) against symptomatic infection at least 14 days after 2 nd dose. ChAdOx1 showed VE 18% (95% CI, 9 to 25) against confirmed VOC Delta infection and VE 33% (95% CI, 23 to 41) against symptomatic infection at least 28 days after 1 st dose; VE 60% (95% CI, 53 to 66) against infection and VE 61% (95% CI, 51 to 70%) against symptomatic infection at least 14 days after 2 nd dose.	Moderate	Test-negative in Scotland; 626,900 specimens; also compared hospitalization rates between S gene positive (VOC Delta) and S gene negative specimens within 14 days of positive test result (not summarized here)
39	Furer *Delayed exclusion – critical risk of bias	BNT162b2 reported no symptomatic infections in the vaccinated group (0/686) compared to 0.83% infections in the vaccinated general population control group.	Critical	Prospective cohort of adults with autoimmune inflammatory rheumatic diseases in Israel; 686 participants; time and setting for VOC Alpha

40	Martinez-Baz	<p>BNT162b2 showed VE 65% (95% CI, 56 to 73) against infection and VE 94% (95% CI, 60 to 99) against hospitalization at least 14 days after 2nd dose in close contacts of COVID+ index cases.</p> <p>ChAdOx1 showed VE 44% (95% CI, 31 to 54) against infection and VE 92% (95% CI, 46 to 99) against hospitalization at least 14 days after 1st dose in close contacts of index cases. Second dose results not reported.</p>	Serious	Prospective cohort of close contacts of COVID+ people in Spain; 20,961 participants; VOC Alpha confirmed for small sample; sample size for Moderna too small to report results separately
41	Chodick (2)	BNT162b2 showed VE 51.4% (95% CI, 16.3 to 71.8) against infection 13 to 24 days after 1 st dose.	Serious	Data-linkage study in Israel (Maccabi Health Care Services); 351,897 participants; time and setting for VOC Alpha
42	Stowe	<p>BNT162b2 showed VE 94% (95% CI, 46 to 99) at least 21 days after 1st dose and VE 96% (95% CI, 86 to 99) at least 14 days after 2nd dose against hospitalization by confirmed VOC Delta.</p> <p>ChAdOx1 showed VE 71% (95% CI, 51 to 83) at least 21 days after 1st dose and VE 92% (95% CI, 75 to 97) 14 days after 2nd dose against hospitalization by confirmed VOC Delta.</p>	Serious	Same cohort as Bernal (3) with extended time frame for symptomatic infection and adding in data-linkage to hospitalization; 14,019 participants; sample confirmed VOC Delta
43	Saciuk	BNT162b2 showed VE 93% (95% CI, 92.6 to 93.4) against infection, VE 93.4% (95% CI, 91.9 to 94.7) against hospitalization and VE 91.1% (95% CI, 86.5 to 94.1) against death at least 7 days after 2 nd dose	Serious	Retrospective cohort of members of a health management organization in Israel; 1,650,885 participants; time and setting for VOC Alpha
44	Zacay *Delayed exclusion – critical risk of bias	BNT162b2 showed VE 61% (95% CI, 49 to 71) at least 14 days after 1 st dose and VE 89% (95% CI, 82 to 94) at least 7 days after 2 nd dose against infection	Serious	Retrospective cohort of a subpopulation of members of a health management organization in Israel who had undergone repeated PCR testing; 6,286 participants; time and setting for VOC Alpha
45	Azamgarhi	BNT162b2 showed VE 70% (95% CI, 6 to 91) against infection at least 14 days after 1 st dose	Serious	Single centre cohort study of HCW in UK; 2,260 participants; time and setting for VOC Alpha
46	Lumley	BNT162b2 (63%) or ChAdOx1 showed VE 64% (95% CI, 50 to 74) 14 days after 1 st dose and VE 90% (95% CI, 62 to 98) 14 days after 2 nd dose against infection	Serious	Prospective cohort of HCWs in Oxfordshire, UK; 13,109 participants; confirmed VOC Alpha

47	Nasreen	<p>BNT162b2 showed VE 89% (95% CI, 86 to 91) against symptomatic infection and VE 95% (95% CI, 92 to 97) against hospitalization at least 7 days after 2nd dose (VOC Alpha); VE 84% (95% CI, 69 to 92) against symptomatic infection and VE 95% (95% CI, 81 to 99) against hospitalization at least 7 days after 2nd dose (VOC Beta/Gamma); VE 87% (95% CI, 64 to 95) against symptomatic infection at least 7 days after 2nd dose (VOC Delta).</p> <p>BNT162b2 showed VE 78% (95% CI, 65 to 86) against hospitalization at least 7 days after 2nd dose (VOC Delta).</p> <p>mRNA-1273 showed VE 92% (95% CI, 86 to 96) against symptomatic infection and VE 94% (95% CI, 89 to 97) against hospitalization at least 7 days after 2nd dose (VOC Alpha).</p> <p>mRNA-1273 showed VE 77% (95% CI, 63 to 86) against symptomatic infection and VE 89% (95% CI, 73 to 95) against hospitalization at least 14 days after 1st dose (VOC Beta/Gamma); VE 72% (95% CI, 57 to 82) against symptomatic infection and VE 96% (95% CI, 72 to 99) against hospitalization at least 14 days after 1st dose (VOC Delta).</p> <p>ChAdOx1 showed VE 64% (95% CI, 60 to 68) against symptomatic infection and VE 85% (95% CI, 81 to 88) against hospitalization at least 14 days after 1st dose (VOC Alpha); VE 48% (95% CI, 28 to 63) against symptomatic infection and VE 83% (95% CI, 66 to 92) against hospitalization at least 14 days after 1st dose (VOC Beta/Gamma); VE 67% (95% CI, 44 to 80) against symptomatic infection and VE 88% (95% CI, 60 to 96) against hospitalization at least 14 days after 1st dose (VOC Delta).</p>	Moderate	Test-negative study in Ontario 421,073 participants (same population as for Chung but extended to May 2021 and more detailed with respect to reporting of VOC); limitations in symptom collection; screening for VOC Alpha, Beta/Gamma and Delta varied during study period
48	Gazit	BNT162b2 showed VE 80% (95% CI, 73 to 85) at least 7 days after 2 nd dose against infection in vaccinated	Serious	Retrospective cohort of household members (household = 2 adults with no children) of a health management organization

		household members of a confirmed COVID+ case.		in Israel; 173,569 households; time and setting for VOC Alpha
49	Jara	CoronaVac showed VE 65.9% (95% CI, 65.2 to 66.6) against infection and VE 86.3% (95% CI, 84.5 to 87.9) against death at least 14 days after 2 nd dose.	Moderate	Prospective cohort in Chile; 10.2 million participants; time and setting for VOC Gamma
50	Chemaitelly	<p>mRNA-1273 showed VE 88.1% (95% CI, 83.7 to 91.5) and VE 100% (95% CI, 91.8 to 100) against infection by confirmed VOC Alpha at least 14 days after 1st and 2nd dose, respectively.</p> <p>mRNA-1273 showed VE 61.3% (95% CI, 56.5 to 65.5) and VE 96.4% (95% CI, 91.9 to 98.7) against infection by confirmed VOC Beta at least 14 days after 1st and 2nd dose, respectively.</p> <p>mRNA-1273 showed VE 81.6% (95% CI, 71.0 to 88.8) and VE 95.7% (95% CI, 73.4 to 99.9) against severe, critical, or fatal disease at least 14 days after 1st and 2nd dose, respectively (combined VOC Alpha and Beta).</p>	Serious	Test-negative in Qatar; >75,000 participants; sample genome sequenced for VOC Alpha and VOC Beta
51	Baum	<p>BNT162b2 or mRNA-1273 showed VE 41% (95% CI, 25 to 54) against infection \geq 21 days after 1st dose; BNT162b2 or mRNA-1273 showed VE 75% (95% CI, 65 to 82) against infection \geq 7 days after 2nd dose in age 70+.</p> <p>BNT162b2 or mRNA-1273 showed VE 41% (95% CI, 17 to 58) against infection \geq 21 days after 1st dose; BNT162b2 or mRNA-1273 showed VE 77% (95% CI, 65 to 85) against infection \geq 7 days after 2nd dose in chronically ill (age 16-69).</p> <p>ChAdOx1 showed VE 24% (95% CI, -1 to 43) against infection \geq 21 days after 1st dose in chronically ill (age 16-69).</p>	Serious	Data-linkage study in Finland; 901,092 participants age 70+ and 774,526 participants age 16 to 69 years with chronic illness; time and setting for VOC Alpha; results for mRNA vaccines not reported separately
52	Balicer	BNT162b2 showed VE 86.1% (95% CI, 82.4 to 89.1) against infection; VE 89% (95% CI, 43 to 100) against hospitalization 7 to 56 days after 2 nd dose.	Serious	Data-linkage study of pregnant women over age 16 in Israel (same database as Dagan); 21,722 participants; time and setting for Alpha.

		Too few events to report VE for severe disease or death.		
53	Mateo-Urdiales	BNT162b2 (61%) or ChAdOx1 (31%) or mRNA-1273 (7%) or Ad26.COV ₂ -S (0.6%) showed VE 78% (95% CI, 76 to 79) against infection 42 to 49 days after at least 1 st dose; VE 93% (95% CI, 89 to 96) against death 35 to 42 days after at least 1 st dose.	Serious	Data-linkage study in Italy; 13,721,506 participants; time and setting for VOC Alpha. Results not reported by vaccine and some participants (42%) who also received 2 nd dose were included in estimates.
54	Goldshtein	BNT162b2 showed VE 78% (95% CI, 57 to 89) against infection at least 28 days after 1 st dose.	Serious	Data-linkage study of pregnant women in Israel (same database as Gazit); 15,060 participants; time and setting for VOC Alpha.
55	Mason	BNT162b2 showed VE 55.2% (95% CI, 40.8 to 66.8) and VE 70.1% (95% CI, 55.1 to 80.1) against infection 21 to 27 days and 35 to 41 days after 1 st dose, respectively.	Moderate	Case-control study of age 80-83 vs 76-79 community-dwelling unvaccinated residents in England; time and setting for VOC Alpha
56	Fabiani	BNT162b2 showed VE 84.1% (95% CI, 39.7 to 95.8) and VE 85.4% (95% CI, -35.3 to 98.4) against infection 14 to 21 days and ≥21 days after 1 st dose, respectively in HCW. BNT162b2 showed VE 95.1% (95% CI, 62.4 to 99.4) against infection ≥7 days after 2 nd dose in HCW.	Serious	Retrospective cohort of HCW in Italy; 6,423 participants; time and setting for VOC Alpha
57	Chia	BNT162b2 or mRNA-1273 showed VE 92.7% (95% CI, 65.7 to 98.4) against severe disease (defined as requiring supplemental oxygen) > 14 days after 2 nd dose.	Serious	Retrospective cohort of confirmed VOC Delta admitted to hospital (including asymptomatic) in Singapore; 218 participants; not reported by vaccine and non-m-RNA vaccine outcomes excluded
58	Kaur *Delayed exclusion – critical ROB	Two doses of Covishield showed VE 87% (95% CI, 33 to 97) against severe disease when compared with one dose (timing of doses not reported).	Critical	Preliminary report of prospective cohort in India; 1500 participants; time and setting for VOC Delta
59	Pramod	Covishield showed VE 49% (95% CI, 17 to 68) against infection 21 days after 1 st dose and VE 54% (95% CI, 27 to 71) against infection 14 days after 2 nd dose. Covishield showed VE 58% (95% CI, 28 to 75) against symptomatic infection 21 days after 1 st dose and VE 64% (95%	Serious	Test-negative study in a single hospital site in India; 360 matched pairs (203 symptomatic pairs); time and setting for VOC Delta

		CI, 38 to 78) against symptomatic infection 14 days after 2 nd dose.		
60	Carazo	BNT162b2 or mRNA-1273 showed VE 60% (95% CI, 53.6 to 65.5) against infection by confirmed VOC Alpha 14 days after 1 st dose. BNT162b2 or mRNA-1273 showed VE 92.6% (95% CI, 87.1 to 95.8) against infection by confirmed VOC Alpha 7 days after 2 nd dose.	Serious	Test-negative study in Quebec, Canada; 58,476 participants; sample confirmed VOC Alpha; reported according to vaccine but not for Alpha at same time
61	Williams	BNT162b2 or mRNA-1273 showed VE 52.5% (95% CI, 26.9 to 69.1) against infection and VE 78.6% (95% CI, 47.9 to 91.2) against severe disease 14 days after 2 nd dose in residents at LTCF. Two deaths in vaccinated residents but were palliative prior to infection. BNT162b2 or mRNA-1273 showed VE 66.2% (95% CI, 2.3 to 88.3) against infection 14 days after 2 nd dose in staff at LTCF. None of the staff developed severe disease.	Serious	Outbreak in a single LTCF in Ontario; 60 residents and 83 staff; sample confirmed VOC Gamma
62	Hitchings(2) *Delayed exclusion – critical ROB	ChAdOx1 showed VE 33.4% (95% CI, 26.4 to 39.7) against symptomatic infection and VE 50.9% (95% CI, 33.6 to 63.8) against ICU admission and VE 61.8% (95% CI, 48.9 to 71.4) against death at least 28 days after 1 st dose for 60+. ChAdOx1 showed VE 77.9% (95% CI, 69.2 to 84.2) against symptomatic infection and VE 89.9% (95% CI, 70.9 to 96.5) against ICU admission and VE 93.6% (95% CI, 81.9 to 97.7) against death at least 14 days after 2 nd dose.	Critical	Test-negative study in Sao Paulo, Brazil; 61,164 participants over age 60; time and setting for VOC Gamma
63	Tang	BNT162b2 showed VE 65.5% (95% CI, 40.9 to 79.9) against infection \geq 14 days after 1 st dose; BNT162b2 showed VE 59.6% (95% CI, 50.7 to 66.9) against infection \geq 14 days after 2 nd dose. BNT162b2 showed VE 100% (95% CI, not reported) against severe, critical or fatal disease \geq 14 days after 1 st dose; BNT162b2 showed VE 97.3% (95%	Serious	Test-negative study in Qatar; 1,140,337 participants; weekly random sequencing of positive samples for VOC Delta

		<p>CI, 84.4 to 99.5) against severe, critical or fatal disease \geq 14 days after 2nd dose.</p> <p>mRNA-1273 showed VE 79.7% (95% CI, 60.8 to 89.5) against infection \geq 14 days after 1st dose; mRNA-1273 showed VE 86.1% (95% CI, 78.0 to 91.3) against infection \geq 14 days after 2nd dose.</p> <p>mRNA-1273 showed VE 100% (95% CI, not reported) against severe, critical or fatal disease \geq 14 days after 1st dose; mRNA-1273 showed VE 100% (95% CI, not reported) against severe, critical or fatal disease \geq 14 days after 2nd dose.</p>		
64	Puranik	<p>BNT162b2 showed VE 42% (95% CI, 13 to 62) against infection 14 days after 2nd dose.</p> <p>mRNA-1273 showed VE 76% (95% CI, 58 to 87) against infection 14 days after 2nd dose.</p>	Serious	Data-linkage study involving Mayo Clinic Health in USA; 25,859 matched triples from Minnesota only; time and setting for Delta at end of study time frame so only last month of data (July 2021) reported here
65	Elliot	<p>BNT162b2 or ChAdOx1 showed VE 64% (95% CI, 11 to 85) against infection unreported number of days after 2nd dose (Round 12: 2021-05-20 to 2021-06-07).</p> <p>BNT162b2 or ChAdOx1 showed VE 49% (95% CI, 22 to 67) against infection unreported number of days after 2nd dose (Round 13: 2021-06-24 to 2021-07-12).</p>	Serious	Surveillance study in England; 121,872 participants; time and setting for VOC Delta; only included data from aged 18 to 64 years due to lowest risk for misclassification bias due to self-reported vaccination status
66	Issac	ChAdOx1 showed VE 85% (95% CI, 71 to 92) against infection 14 days after 2 nd dose.	Serious	Prospective cohort of HCW at a single hospital in India; 342 participants; time and setting for VOC Delta.
67	Marco *Delayed exclusion – critical ROB	ChAdOx1 showed VE 23% (95% CI, not reported) against infection at least 21 days after 1 st dose.	Critical	Outbreak study of prison inmates in Barcelona; 217 participants (184 inmates); sequenced for VOC Alpha
68	Kale *Delayed exclusion – critical ROB	ChAdOx1 showed VE 60% (95% CI, 45 to 70) against infection at least 14 days after 2 nd dose.	Critical	Prospective cohort of HCW at a single hospital in India; 1858 participants; sample sequenced for VOC Delta
69	Israel	BNT162b2 showed OR 2.06 (95% CI, 1.69 to 2.51) for infection comparing	Moderate	Retrospective cohort of fully vaccinated (>14 days after 2 nd

		<u>fully vaccinated longer than or equal to 146 days vs fully vaccinated less than 146 days.</u>		dose) members of a health management organization in Israel who underwent testing; 33,993 participants; time and setting for VOC Delta
70	Gram	ChAdOx1 showed VE 44% (95% CI, 29 to 56) against infection 21 to 27 days after 1 st dose. No deaths in vaccinated participants. First dose ChAdOx1 followed by second dose BNT162b2 or mRNA-1273 showed VE 88% (95% CI, 83 to 92) against infection ≥ 14 days after 2 nd dose.	Serious	Data-linkage study in Denmark; 5,542,079 participants; time and setting for VOC Alpha
71	Pouwels	BNT162b2 showed VE 59% (95% CI, 52 to 65%) against infection ≥21 days after 1 st dose and VE 78% (95% CI, 68 to 84) against infection ≥ 14 days after 2 nd dose (VOC Alpha age 18+). BNT162b2 showed VE 57% (95% CI, 50 to 63) against infection ≥21 days after 1 st dose and VE 80% (95% CI, 77 to 83) against infection ≥ 14 days after 2 nd dose (VOC Delta age 18+). ChAdOx1 showed VE 63% (95% CI, 55 to 69) against infection ≥21 days after 1 st dose and VE 79% (95% CI, 56 to 90) against infection ≥ 14 days after 2 nd dose (VOC Alpha age 18+). ChAdOx1 showed VE 46% (95% CI, 35 to 55) against infection ≥21 days after 1 st dose and VE 67% (95% CI, 62 to 71) against infection ≥ 14 days after 2 nd dose (VOC Delta age 18+). mRNA-1273 showed VE 75% (95% CI: 64 to 83) against infection ≥21 days after 1 st dose (VOC Delta age 18 to 64).	Serious	Survey of randomly selected private households with longitudinal follow-up in UK; 743,526 participants; also reported for 18-64 years; sample sequenced for VOC Alpha and VOC Delta
72	Abu-Raddad (2)	<u>BNT162b2 after prior infection</u> showed VE 85% (95% CI, 80 to 89) against re-infection compared to BNT162b2 <u>without prior infection.</u> mRNA-1273 <u>after prior infection</u> showed VE 15% (95% CI, -105 to 66)	Serious	Retrospective matched cohorts (2) of fully vaccinated (>14 days after 2 nd dose) in Qatar; 151,076 participants; sample sequenced for VOC Alpha and VOC Beta

		against re-infection compared to mRNA-1273 <u>without prior infection</u> .		
73	Gazit (2)	BNT162b2 showed OR 13.06 (95% CI, 8.08 to 21.11) against infection and OR 27.02 (95% CI, 12.7 to 57.5) against symptomatic disease compared to <u>prior infection</u> .	Moderate	Retrospective matched cohorts of fully vaccinated (>14 days after 2 nd dose) in Israel; 778,658 participants; time and setting for VOC Delta
74	Rosenberg	BNT162b2 (51%), mRNA-1273 (40%) or Ad26.COVS (9%) showed VE 91.7% against infection ≥14 days after 2 nd dose (Week of May 3, 2021: VOC Alpha). BNT162b2 (51%), mRNA-1273 (40%) or Ad26.COVS (9%) showed VE 79.8% against infection ≥14 days after 2 nd dose (Week of July 19, 2021: VOC Delta).	Serious	Surveillance report in New York, USA; >13 million participants; time and setting for VOC Delta (from 2% to 80% during study period)
75	Al-Qahtani	BNT162b2 ≥14 days after 2 nd dose, showed VE 99.9% (95% CI, 99.2 to 100) against ICU admission, and VE 99.5% (95% CI, 98.4 to 99.8) against death (VOC Alpha and Delta). ChAdOx1 ≥14 days after 2 nd dose, showed VE 99.2% (95% CI, 97.6 to 99.7) against ICU admission, and VE 99.6% (95% CI, 97.2 to 100) against death (VOC Alpha and Delta). BBIBP-CorV ≥14 days after 2 nd dose, showed VE 95.4% (95% CI, 94.6 to 96.2) against ICU admission, and VE 94.3% (95% CI, 93.1 to 95.4) against death (VOC Alpha and Delta). Sputnik V ≥14 days after 2 nd dose, showed VE 100% (95% CI, 99.2 to 100) against ICU admission, and VE 99.5% (95% CI, 98.5 to 99.9) against death (VOC Alpha and Delta).	Serious	Retrospective cohort of fully vaccinated (>14 days after 2 nd dose) in Bahrain; 1,242,279 participants; time and setting for VOC Alpha (dominant before May 2021) and Delta (dominant after May 2021).
76	Goldberg (2)	BNT162b2 showed VE 50% (95% CI, 45 to 55) for those vaccinated in January 2021, and VE 73% (95% CI, 67 to 78) for those vaccinated in May 2021 against infection after the 2 nd dose (VOC Delta age 16 to 39). BNT162b2 showed VE 58% (95% CI, 54 to 62) for those vaccinated in	Serious	Data-linkage study of fully vaccinated in Israel; 4,785,245 fully vaccinated participants; time and setting for VOC Delta (dominant after May 2021).

		<p>January 2021, and VE 80% (95% CI, 71 to 86) for those vaccinated in May 2021 against infection after the 2nd dose (VOC Delta age 40 to 59).</p> <p>BNT162b2 showed VE 57% (95% CI, 52 to 62) for those vaccinated in January 2021, and VE 75% (95% CI, 58 to 85) for those vaccinated in May 2021 against infection after the 2nd dose (VOC Delta age 60+).</p> <p>BNT162b2 showed VE 94% (95% CI, 87 to 97) for those vaccinated in January 2021, and VE 98% (95% CI, 94 to 99) for those vaccinated in March 2021 against severe, critical, or fatal disease after the 2nd dose (VOC Delta age 40 to 59).</p> <p>BNT162b2 showed VE 86% (95% CI, 82 to 90) for those vaccinated in January 2021, and VE 91% (95% CI, 85 to 95) for those vaccinated in March 2021 against severe, critical, or fatal disease after the 2nd dose (VOC Delta age 60+).</p>		
77	<p>Herlihy</p> <p>*Delayed exclusion – critical risk of bias</p>	<p>BNT162b2, mRNA-1273, or Ad26.COVS2 showed VE 78% (95% CI, 71 to 84) in Mesa County and VE 89% (95% CI, 88 to 91) in other Colorado counties against symptomatic infection an unreported number of days after 2nd dose (VOC Delta).</p>	Critical	<p>Surveillance report in Mesa County-Colorado, USA; 37,439 cases participants; sample sequenced for VOC Delta (43% to 88% during study period)</p>
78	<p>Ghosh</p> <p>*Delayed exclusion – critical risk of bias</p>	<p>ChAdOx1 showed unadjusted VE 75.2% (95% CI, 73.8 to 76.8) against infection ≥ 14 days after 1st dose, and unadjusted VE 54.6% (95% CI, 52.6 to 56.6) ≥ 14 days after 2nd dose against infection in HCW (VOC Alpha to Delta).</p>	Critical	<p>Retrospective cohort of Armed Forces HCW and frontline workers in India; 1,595,630 participants; time and setting for VOC Delta at end of study only.</p>
79	<p>Amirthalingam</p>	<p>BNT162b2 showed VE 77% (95% CI, 56 to 88) against symptomatic infection when 2nd dose given 19-29 days after 1st dose, and VE 94% (95% CI, 73 to 99) against symptomatic infection when 2nd dose given 85+ days after 1st dose (VOC Alpha age 80+).</p>	Moderate	<p>Test-negative study in England; time and setting for VOC Alpha (dominant before May 2021) and Delta (dominant after May 2021).</p>

		<p>BNT162b2 showed VE 77% (95% CI, 66 to 85) against symptomatic infection when 2nd dose given 19-29 days after 1st dose, and VE 86% (95% CI, 70 to 94) against symptomatic infection when 2nd dose given 85+ days after 1st dose (VOC Alpha age 65 to 79).</p> <p>ChAdOx1 showed VE 96%(95% CI, 72 to 100) against infection when 2nd dose given 19-29 days after 1st dose, and VE 88% (95% CI, 48 to 97) against infection when 2nd dose given 85+ days after 1st dose after 2nd dose (VOC Alpha age 80+).</p> <p>ChAdOx1 showed VE 66% (95% CI, 47 to 77) against infection when 2nd dose given 19-29 days after 1st dose, and VE 73% (95% CI, 56 to 83) against infection when 2nd dose given 85+ days after 1st dose after 2nd dose (VOC Alpha age 65 to 79).</p>		
80	<p>Butt (2)</p> <p>*Delayed exclusion – critical ROB</p>	Unvaccinated participants had HR 2.84 (95% CI, 1.80 to 4.47) of severe disease compared to BNT162b2 ≥14 days after 2 nd dose.	Critical	Case-control study in Qatar; 456 matched cases; time and setting for VOC Alpha
81	<p>Fowlkes</p>	<p>BNT162b2 (65%), mRNA-1273 (33%), or Ad26.COVS.S (2%) showed VE 91% (95% CI, 81 to 96) against infection ≥ 14 days after 2nd dose (during time of VOC Alpha).</p> <p>BNT162b2 (65%), mRNA-1273 (33%), or Ad26.COVS.S (2%) showed VE 66% (95% CI, 26 to 84) against infection ≥ 14 days after 2nd dose (during time of VOC Delta).</p> <p>BNT162b2 (65%), mRNA-1273 (33%), or Ad26.COVS.S (2%) showed VE 85% (95% CI, 68 to 93) against infection 14-119 days after full vaccination) and VE 73% (95% CI, 49 to 86) against infection ≥150 days after full vaccination (during time of VOC Alpha to Delta).</p>	Moderate	Prospective cohort of HCW and other essential frontline workers in 6 states in the USA; 7,112 participants; updated report to cover VOC Delta period
82	<p>Bhattacharya a</p>	Covaxin (94%) and Covishield showed VE 83% (95% CI, 73 to 89) against	Serious	Prospective cross-sectional cohort of HCW and their

		<p>symptomatic infection \geq 14 days after 2nd dose.</p> <p>Covaxin (94%) and Covishield showed VE 93% (95% CI, 64 to 99) against ICU admission or death \geq 14 days after 2nd dose.</p>		families at a single site in India; 638 participants (55 inpatients); time and setting of VOC Delta
83	Nunes	<p>BNT162b2 (45%) or mRNA-1273 (8%) showed VE 96% (95% CI, 92 to 98) against COVID-related death \geq14 days after 2nd dose (age 65 to 79).</p> <p>BNT162b2 (80%) or mRNA-1273 (2%) showed VE 81% (95% CI, 74 to 87) against COVID-related death \geq14 days after 2nd dose (age \geq80).</p> <p>BNT162b2 (80%) or mRNA-1273 (2%) showed VE 86% (95% CI, 68 to 93) against COVID-related death 14 to 41 days after 2nd dose and VE 74% (95% CI, 60 to 83) against COVID-related death \geq 98 days after 2nd dose for HR 1.80 (0.77 to 4.25) (age \geq80).</p>	Moderate	Data-linkage study of community-dwelling adults \geq 65 in Portugal; 2,050,950 participants; time and setting for VOC Alpha to Delta
84	Tartof	<p>BNT162b2 showed VE 75% (95% CI, 71 to 78) against infection 7 days after 2nd dose (confirmed VOC Delta).</p> <p>BNT162b2 showed VE 91% (95% CI, 88 to 92) against infection 7 days after 2nd dose (confirmed non-VOC Delta).</p> <p>BNT162b2 showed VE 93% (95% CI, 85 to 87) against infection 7 to 30 days after 2nd dose and VE 53% (95% CI, 39 to 65) against infection \geq 127+ days after 2nd dose (confirmed VOC Delta).</p> <p>BNT162b2 showed VE 97% (95% CI, 95 to 99) against infection 7 to 30 days after 2nd dose and VE 67% (95% CI, 45 to 80) against infection \geq 127+ days after 2nd dose (confirmed non-VOC Delta).</p>	Moderate	Retrospective cohort of members of a health management organization in California; 3,436,957 participants; VOC Alpha to VOC Delta (only 28% confirmed Delta)
85	Li (3)	<p>CoronaVac (combined with other inactivated vaccines) showed VE 59% (95% CI, 16 to 81.6) against symptomatic infection and VE 100% against severe infection \geq14 days after 2nd dose.</p>	Serious	Test-negative study in Guangzhou, China; 366 participants; sample sequenced for VOC Delta

86	Scobie *Delayed exclusion – critical ROB	BNT162b2 or mRNA-1273 (92%), or Ad26.COVS2.S showed VE 90% (95% CI not reported) against infection and VE 93% (95% CI not reported) against death \geq 14 days after 2 nd dose (April to June: VOC Alpha). BNT162b2, mRNA-1273, or Ad26.COVS2.S showed VE 76% (95% CI not reported) against infection and VE 90% (95% CI not reported) against death \geq 14 days after 2 nd dose (June to July: VOC Delta >50%).	Critical	Surveillance study in 13 states in the USA; 615,454; time and setting for VOC Alpha to VOC Delta
87	Satwik	ChAdOx1 showed VE 18% (95% CI, -10 to 38) against symptomatic infection; VE 37% (-24 to 68) against moderate to severe disease and VE 69% (95% CI, -160 to 97) against death \geq 21 days after 1 st dose. ChAdOx1 showed VE 28% (95% CI, 10 to 41) against symptomatic infection; VE 67% (44 to 81) against moderate to severe disease and VE 97% (95% CI, 43 to 99.8) against death \geq 14 days after 2 nd dose.	Serious	Retrospective cohort study of HCW at a single hospital in New Delhi, India; 4276 participants; sample sequenced for VOC Delta
88	Seppala	BNT162b2 (74%) or ChAdOx1 (22%) or mRNA-1273 (10%) showed VE 84.4% (95% CI, 81.8 to 86.5) against infection \geq 7 days after 2 nd dose (VOC Alpha). BNT162b2 (74%) or ChAdOx1 (22%) or mRNA-1273 (10%) showed VE 64.6% (95% CI, 60.6 to 68.2) against infection \geq 7 days after 2 nd dose (VOC Delta).	Serious	Population cohort in Norway; 4,204,859 participants; sequenced for VOC Alpha and VOC Delta
89	Polinski *Delayed exclusion – critical ROB	Ad26.COVS2.S showed VE* 67% (95% 60 to 73) against infection unknown number of days after dose (June to July: VOC Delta in high prevalence states). *unadjusted for substantial under-reporting of vaccination status	Critical	Data-linkage of members of a medical insurance group in USA; 1,914,670 participants; time and setting for VOC Alpha to Delta (only data for VOC Delta reported here)
90	Chemaitelly (2)	BNT162b2 or mRNA-1273 showed VE 46.6% (95% CI, 0.0 to 73.7) against infection \geq 14 days after 2 nd dose, VE 66.0% (95% CI, 21.3 to 85.3) \geq 42 days after 2 nd dose, and VE 73.9% (95% CI,	Serious	Retrospective cohort of immunosuppressed kidney transplant recipients in Qatar; 782 participants; time and setting for VOC Alpha and VOC Beta.

		33 to 98.9) \geq 56 days after 2 nd dose (VOC Alpha and Beta). BNT162b2 or mRNA-1273 showed VE 72.3% (95% CI, 0.0 to 90.9) against severe, critical, or fatal disease \geq 14 days after 2 nd dose, VE 85% (95% CI, 35.7 to 96.5) \geq 42 days after 2 nd dose, and VE 83.8% (95% CI, 31.3 to 96.2) \geq 56 days after 2 nd dose (VOC Alpha and Beta).		
91	Hu	Inactivated vaccines showed VE 89% (95% CI, 55 to 98) against severe, critical, or fatal disease \geq 14 days after 2 nd dose (VOC Delta).	Serious	Outbreak report of hospitalized cases in China; 476 participants; PCR population for VOC Delta.
92	Andrews	BNT162b2 showed VE 62.7% (61.7 to 63.8) against symptomatic infection 1 week after 2 nd dose and VE 47.3% (45.0 to 49.6) 20+ weeks after 2 nd dose (VOC Delta). ChAdOx1 showed VE 92.4% (92.1 to 92.7) against symptomatic infection 1 week after 2 nd dose and VE 69.7% (68.7 to 70.5) 20+ weeks after 2 nd dose (VOC Delta). mRNA-1273 showed VE 95.2% (94.4 to 95.9) against symptomatic infection 1 week after 2 nd dose and VE 90.3% (67.2 to 97.1) 10 to 14 weeks after 2 nd dose (VOC Delta).	Moderate	Test-negative study in England; 1,475,391 participants; VOC Alpha to VOC Delta (only data for VOC Delta reported here)
93	Patalon	BNT162b2 showed marginal VE 3% (95% CI, -5 to 10) against infection 0 to 6 days after 3 rd dose and marginal VE 84.0% (95% CI, 79 to 88) 14 to 20 days after 3 rd dose compared to 2 doses.	Moderate	Test-negative study in Israel comparing 2 doses of vaccine versus 3 doses of vaccine; 182,076 participants; time and setting for VOC Delta
94	Kissling	BNT162b2 showed VE 87% (95% CI, 74 to 93) against symptomatic infection 14 days after 2 nd dose.	Serious	Test-negative study of adults >65 years in primary care setting in I-MOVE group (England, France, Ireland, the Netherlands, Portugal, Scotland, Spain and Sweden); 4,964 participants; sample sequenced for VOC Alpha.
95	McKeigue	BNT162b2 or mRNA-1273 showed VE 92% (95% CI, 85 to 96) against severe disease in people with no risk conditions and VE 72% (95% CI, 51 to 84) against severe disease in people	Serious	Case-control study of people with clinical risk conditions in Scotland; 50,935 participants; time and setting for VOC Alpha to VOC Delta

		<p>eligible for shielding at least 14 days after 2nd dose.</p> <p>ChAdOx1 showed VE 94% (95% CI, 90 to 96) against severe disease in people with no risk conditions and VE 63% (95% CI, 46 to 75) against severe disease in people eligible for shielding \geq 14 days after 2nd dose.</p>		
96	Kertes	BNT162b2 showed OR 1.61 (95% CI, 1.45 to 1.79) for infection comparing <u>fully vaccinated Jan to Feb</u> vs <u>fully vaccinated Mar to May</u> .	Serious	Data-linkage study of people fully vaccinated 6 months previously in Israel; 1,423,098 participants; time and setting for VOC Alpha to VOC Delta
97	Barlow	<p>BNT162b2 or mRNA-1273 showed VE 74% (95% CI, 65 to 82) against infection \geq 14 days after 2nd dose.</p> <p>Ad26.COVS showed VE 51% (95% CI, -2 to 76) against infection \geq 14 days after 2nd dose.</p>	Serious	Test-negative study in Oregon; 1000 participants; time and setting for VOC Delta
98	Chemaitelly (3)	<p>BNT162b2 showed VE 65.8% (95% CI, 63.8 to 67.7) against infection 5 to 9 weeks after 2nd dose; VE 29.7% (95% CI, 21.7 to 36.9) against infection 15 to 19 weeks after 2nd dose and VE 0% (95% CI, 0 to 0) against infection 20 to 24 weeks after 2nd dose.</p> <p>BNT162b2 showed VE 94.2% (95% CI, 91.0 to 96.5) against hospitalization or death 5 to 9 weeks after 2nd dose; VE 86.4% (95% CI, 69.9 to 94.8) against hospitalization or death 15 to 19 weeks after 2nd dose and VE 95.3% (95% CI, 70.5 to 99.9) against hospitalization or death 20 to 24 weeks after 2nd dose.</p>	Serious	Test-negative study in Qatar; 1,472,761 participants; time and setting for VOC Beta to VOC Delta
99	Thompson (3)	<p>BNT162b2 showed VE 90% (95% CI, 86 to 93) against ICU admission \geq14 days after 2nd dose.</p> <p>BNT162b2 showed VE 92% (95% CI, 88 to 94) against hospitalization at 28 to 41 days after 2nd dose and VE 86% (95% CI, 74 to 93) \geq112 days after 2nd dose.</p>	Serious	Test-negative study of adults \geq 50 years in the USA; 76,463 participants; time and setting for VOC Alpha

Section 2: excluded studies	
Author	Reason for exclusion
Akhrass	Delayed exclusion – Clinical outcomes of interest for this LES not reported
Albahrani	Prevalence of variants unknown and suspected to be <50%
Alencar	Critical risk of bias
Alhamlan	Vaccine effectiveness not reported
Alharbi	Prevalence of variants unknown and suspected to be <50%
Ali	Prevalence of variants unknown and suspected to be <50%
Alkhafaji	Prevalence of variants unknown and suspected to be <50%
Allen	Serious risk of bias
Almufty	Prevalence of variants unknown and suspected to be <50%
Apisarntharak	Vaccine effectiveness not reported
Arashiro	Vaccine effectiveness not reported
Ayass	Clinical outcomes of interest for this LES not reported
Baden	Critical risk of bias
Bailly	Delayed exclusion – critical risk of bias
Bajema	Clinical outcomes of interest for this LES not reported
Barchuk	Clinical outcomes of interest for this LES not reported
Bergwerk	Vaccine effectiveness not reported
Bernal (2)	Delayed exclusion – critical risk of bias
Bjork	Prevalence of variants unknown and suspected to be <50%
Blaiszik	Clinical outcomes of interest for this LES not reported
Borobia	Clinical outcomes of interest for this LES not reported
Britton	Prevalence of variants unknown and suspected to be <50%
Brown	Vaccine effectiveness not reported
Bruxvoort	Prevalence of variants unknown and suspected to be <50%
Butt	Prevalence of variants unknown and suspected to be <50%
Butt	Critical risk of bias
Butt (2)	Delayed exclusion – critical risk of bias
Cabezas	Prevalence of variants unknown and suspected to be <50%
Caillard	Clinical outcomes of interest for this LES not reported
Cavanaugh	Delayed exclusion – VOI not VOC
Charmet	Serious risk of bias
Chau	Vaccine effectiveness not reported
Clemens	Prevalence of variants unknown and suspected to be <50%
Corchado-Garcia	Prevalence of variants unknown and suspected to be <50%
Dash	Critical risk of bias
de Gier Brechje	Prevalence of variants unknown and suspected to be <50%
Domi	Prevalence of variants unknown and suspected to be <50%

Voysey	Prevalence of variants unknown and suspected to be <50%
Waldhorn	Serious risk of bias
Wickert	Critical risk of bias
Williams (2)	Serious risk of bias
Young-Xu	Prevalence of variants unknown and suspected to be <50%
Zacay	Delayed exclusion – critical risk of bias
Zhong	Clinical outcomes of interest for this LES not reported

Appendix 2: Glossary

AZ: AstraZeneca

Alpha: variant of concern B.1.1.7

Beta: variant of concern B.1.351

Delta: variant of concern B.1.617.2

Gamma: variant of concern P.1

Epsilon: variant of concern B.1.427/B.1.429

HCW: Healthcare workers

LTC: Long-term care

LTCF: Long-term care facility

MOD: Moderna

Obs: observational study

OR: odds ratio

PF: Pfizer

RME: range of mean estimates across 2 or more studies

VE (Vaccine effectiveness): measure of how well a vaccine protects people from getting the outcome of interest in real-world practice (For example: VE of 92% against infection means that 92% of people will be protected from becoming infected with COVID and 8% of people will still be at risk of becoming infected with COVID)

VOC: variant of concern

VOI: variant of interest

Appendix 3: Data-extraction template

Vaccine product	
Source	First author of study
Link	DOI or Pubmed ID
Date published	in format YYYY/MM/DD or preprint
Country	
Funding	public or industry
Study details	
Study type	RCT/cohort/data-linkage/test-negative/case-control/other
Surveillance	routine screening Y or N
Population(s)	general public/LTC/Households/HCW/Other
Control group	not vaccinated, <7day vaccinated internal control, none, other
Total (N)	number of all study participants
Female	number or %
LTC	number or %
HCW	number or %
Households	number or %
>80	number or %
>70	number or %
>60	number or %
Outcomes	outcomes separated by VOC type
Outcomes	confirmed infection/asymptomatic/mild symptomatic/severe symptoms/hospitalized/ICU/death
1st Dose VE	VE with 95% CI
Days post 1st dose	days post 1st dose when VE provided
2nd Dose VE	VE with 95% CI
Days post 2nd dose	days post 2nd dose when VE provided
Rates per X person-days/years	vaccinated vs control
HR	vaccinated vs control
RR	vaccinated vs control
Adjusted	Regression, stratification, matching and associated variables
Transmission	infection rates in unvaccinated contacts of vaccinated individuals
Critical appraisal	See Appendix 5

Appendix 4: Process for assigning Variant of Concern to studies

A Variant of Concern is considered to be the dominant ($\geq 50\%$) strain in a study if any of the following conditions apply:

- i) the authors make a statement about prevalence of VOC during the study time frame
- ii) time and setting of the study is consistent with a VOC being dominant according to the following open tracking sources:

Nextstrain. Real-time tracking of pathogen evolution. <https://nextstrain.org/>
Outbreak Info. <https://outbreak.info/location-reports>

Appendix 5: Research question and critical appraisal process (revised 06 Oct 2021)

Review question:

Participants	People at risk of COVID-19 (usually without but sometimes with previous COVID-19 infection)
Intervention	COVID-19 Vaccine
Comparator	Unvaccinated people (*)
Outcomes	PCR-diagnosis of COVID-19 infection (**); symptomatic disease; hospital/ICU admission; death; transmission

(*) before-after studies, where the infection rate in the first 2 weeks after the vaccination are used as control are (**)

(**) commonly performed and may be appraised confirmation of specific variant, or reasonable evidence the variant was the dominant circulating strain

Critical Appraisal Process

We appraise the quality of the individual studies using an adapted version of ROBINS-I. This tool classifies the Risk of Bias of a study as **Low, Moderate, Serious, Critical, or No Information**.

Low Risk of Bias indicates High Quality, and Critical Risk of Bias indicates Very Low (insufficient)

Quality. ROBINS-I appraises 7 bias domains and judges each study against an ideal reference

randomized controlled trial. To improve the utility of ROBINS-I for assessing studies reporting

vaccine effectiveness, we have focused on study characteristics that introduce bias as reported in the

vaccine literature. (WHO. Evaluation of COVID-19 vaccine effectiveness. Interim Guidance. 17

March 2021). Studies rated as “serious” or “critical” risk of bias will not be included in the Summary

statements on Page 1-2 (exception: if limited data available for an outcome for a VOC). An overall

judgement of “serious” or “critical” is given when the study is judged to be at critical risk of bias in

at least one domain.

VE Study Characteristics that may introduce bias	Description
Study design ROBINS-I: Bias in selection of participants into study	<p>In cohort studies, people who get vaccinated may differ in health-seeking behaviour from people who do not get vaccinated; using a test-negative study design minimizes this type of bias</p> <p><u>Examples and typical judgement:</u></p> <ul style="list-style-type: none"> • test-negative design with a clearly defined symptomatic study population (low) • test-negative design (mixed or unclear study population) or case-control or cohort design or data-linkage with no concerns (moderate) • cross-sectional design or case-control (concerns about whether controls had same access to vaccines/risk of exposure to COVID or unclear) or cohort design (concerns that exposed and non-exposed were not drawn from the same population) (serious)
Method for confirming vaccination ROBINS-I: Bias in classification of interventions	<p>Questionnaires are prone to recollection bias; Population databases developed for purpose of tracking COVID vaccines minimize this type of bias</p> <p><u>Examples and typical judgement:</u></p>

	<ul style="list-style-type: none"> • database linkage study (low) • Questionnaire with confirmation by an additional method (e.g. registry) of at least a subset of study population (moderate) • Questionnaire without confirmation by an additional method (serious) • Estimating vaccination status based on surveillance data alone (critical)
<p>Databases used for retrieval of COVID test results, participant prognostic factors, and clinical outcomes</p> <p>ROBINS-I: Bias in classification of interventions</p>	<p>Databases developed for collecting data on COVID are less prone to bias due to missing information and m</p> <p><u>Examples and typical judgement:</u></p> <ul style="list-style-type: none"> • database for non-COVID purpose but with individual level data (moderate) • database for non-COVID purpose without individual level data (serious) • no or unclear description of database type (critical)
<p>Assignment of infection start date</p> <p>ROBINS-I: Bias in classification of interventions</p>	<p>Using date of symptom onset (if within 10 days of testing) as infection start date reduces risk of misclassification bias (e.g., vaccinated participant who is reported as COVID+ may have been infected prior to receiving the vaccine or during non-immune period) and sensitivity of assays decreases over time</p> <p><u>Examples and typical judgement:</u></p> <ul style="list-style-type: none"> • using a PCR positive test that was part of an ongoing standardized monitoring system (e.g., within a health network) (low) • using sample date without interview or documented confirmation of symptoms ≤ 10 days (relevant for symptomatic disease only) (serious)
<p>Verification of symptoms</p> <p>ROBINS-I: Bias in classification of interventions</p>	<p>Prospective, standardized collection of symptoms from patients reduces risk of missing information bias; testing within 10 days after symptom onset reduces risk of false-negative COVID test</p> <p><u>Examples and typical judgement:</u></p> <ul style="list-style-type: none"> • using sample date without patient report/ documented confirmation of symptoms ≤ 10 days (relevant for symptomatic disease only) (serious) • if symptomatic COVID is not an outcome (no information)

<p>Accounting for non-immune period (first 14 days after first vaccine dose)</p> <p>ROBINS-I: Bias due to confounding</p>	<p>Reported absence of vaccine effect during non-immune period reduces risk of residual confounding bias</p> <p><u>Example/common case:</u></p> <ul style="list-style-type: none"> • presence of an effect during non-immune period or result not reported (moderate) • unclear that non-immune period was considered (serious)
<p>Inclusion of participants with prior COVID infection</p> <p>ROBINS-I: Bias due to confounding</p>	<p>Exclusion (or separate analysis) of participants with prior COVID infection reduces concern about differences in infectivity as well as risk-taking and health-seeking behaviour</p> <p><u>Examples and typical judgement:</u></p> <ul style="list-style-type: none"> • inclusion of prior infection status as a covariate in the models (moderate) • previously infected not excluded or analyzed separately (serious)
<p>Accounting for calendar time</p> <p>ROBINS-I: Bias due to confounding (time-varying confounding)</p>	<p>Accounting for calendar time reduces bias due to differences in vaccine accessibility and risk of exposure over time</p> <p><u>Examples and typical judgement:</u></p> <ul style="list-style-type: none"> • use of time-varying statistics without explicit mention of adjustment for calendar time (moderate) • not taken into account but short-time frame (e.g. ≤ 2 months) (serious) • not taken into account and time frame > 2 months (critical)
<p>Adjustment for prognostic factors</p> <p>ROBINS-I: Bias due to confounding</p>	<p>Adjustment for prognostic factors for COVID infection, severity of disease, and vaccination, such as age, gender, race, ethnicity, socioeconomic factors, occupation (HCW, LTC), and chronic medical conditions</p> <p><u>Examples and typical judgement:</u></p> <ul style="list-style-type: none"> • no or insufficient adjustment for occupation (or number of tests as a surrogate for exposure risk) - exception age > 65 or LTCH resident (moderate) • no or insufficient adjustment for socioeconomic factors (or neighborhood or income as a surrogate), race, ethnicity (serious) • no or insufficient adjustment for age (any study population) or chronic medical conditions (LTC)(critical)
<p>Testing frequency</p> <p>ROBINS-I: Bias in measurement of outcomes</p>	<p>Similar frequency of testing between groups reduces risk of bias introduced by detecting asymptomatic infection in one group but not in another (e.g. when only one group undergoes surveillance screening)</p>

	<p><u>Examples and typical judgement:</u></p> <ul style="list-style-type: none">• no systematic screening but consistent methods for detection in one group vs. the other, e.g., within health networks (moderate)• screening performed for a subset of both study groups (serious)• screening performed routinely in one study group but not in the other (critical)

Appendix 6: Detailed description of the narrative summary statement

We include studies with the following clinical outcomes: prevention of infection, severe disease (as defined by the study investigators), death, and prevention of transmission. These outcomes were selected because they are less susceptible to bias. If data are not available for these specific outcomes, but are available for symptomatic infection and/or hospitalization, data for these additional outcomes are provided temporarily. Studies reporting only antibody responses are excluded.

We aim at providing a lay language, standardized summary statement for each combination of vaccine and VOC for which we found evidence.

Where more than one study was found, we will provide a summary statement with a **range of the estimates across the studies.**

Where a single study provided data, we will provide the **estimate plus 95% confidence interval** for that study. As additional studies are added, the estimate plus confidence interval will be replaced by a range as described above.

In the summaries, “prevented” or “protects” will be applied to mean estimates or range of mean estimates that are greater than or equal to 50%.
